ADYA · RAI · THE REVENUE AI

Use 20 tools.
Or use RAI.

Adya

One agent that understands your company, your products, your goals, your channels, and runs your entire go-to-market. Then improves itself.

For CMOs, growth leaders, and partners

THE PROBLEM

The AI GTM stack exploded. Your team became the glue.

48+ tools, 8 categories

The 2026 market maps count 48 tools in 8 categories, with hundreds of AI GTM agents behind them. Every quarter adds more.

Each does one job

Enrichment, sending, signals, CRM, analytics. Each tool is good at its slice and blind to everything else.

None share memory

What outbound learns never reaches the ads. What analytics finds never reaches the copy. Insight dies inside the tool that produced it.

A human orchestrates

Someone senior wires it together with spreadsheets and workflow glue, and carries the strategy in their head. When they leave, it leaves.

A stack is a chain that leaks.

THE STACK

The ten layers every advanced GTM team runs

L1 Onboarding & Strategy

Company, products, ICP, personas, geo, brand voice, positioning. Same profile per competitor. Channel analysis.

L2 Lead Generation

ICP & persona research, LinkedIn scraping, background checks, contact details.

L3 Signals Verification

Jobs, ads, intent, posts, annual reports, competitor moves, trend shifts.

L4 Inbound

Google, Meta, Reddit, LinkedIn ads. SEO, AEO, GEO. Social, community, newsletters.

L5 Outbound

Email, InMail, LinkedIn messages, DMs, WhatsApp, calling.

L6 Demand Generation

ABM across accounts in parallel, drip marketing, cold outreach.

L7 Content

Images, infographics, video, posts, newsletters, tutorials.

L8 CRM & Pipeline

Campaigns, ToFu-MoFu-BoFu, calendar booking, content calendar, 3-level templates.

L9 BI & Data Analytics

Reports and dashboards on demand. Deep research and strategy planning.

L10 Memory & Learning

Memory by account, user, session, campaign, TG. Tests, improvements, analysis.

BEFORE · TODAY

Who runs each layer today

Onboarding & Strategy	Klue · Crayon · Gong · Clari · the CMO's head
Lead Generation	Clay · Apollo · ZoomInfo · Cognism · Lusha · PhantomBuster
Signals Verification	6sense · Bombora · Warmly · Common Room · Koala · RB2B
Inbound	Surfer · Beehiiv · Typefully
Outbound	Smartlead · Instantly · Outreach · HeyReach · Expandi · 11x · Artisan
Demand Generation	Demandbase · Mutiny · Qualified · Klaviyo
Content	Jasper · Midjourney · HeyGen · Descript
CRM & Pipeline	Attio · Chili Piper
BI & Analytics	Segment
Memory & Learning	*No tool. Heads, threads, and the RevOps hire who left.*

Plus the hidden eleventh layer: a human orchestrator gluing it all together.

AFTER · WITH RAI

RAI replaces the layers that think. It plugs into everything else.

RAI REPLACES

Orchestration

what runs, when, for whom

Research

you, competitors, channels, signals

Planning

strategy, campaigns, experiments

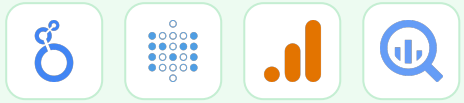

Execution

inbound, outbound, ABM, content

Analytics + Learning

insight on demand, memory, self-run tests

THE INTEGRATION RAIL · RAI DRIVES WHAT YOU ALREADY USE

CRM	
Mail	
BI & analytics	
Ad channels	
Channels	
Calendar	

Data & infra: Apify · Apollo · Lusha · Prospeo · Icypeas · InboxKit · Unipile · MSG91

Plumbing and pipes, not thinking. One brain drives all of it.

One brain. One memory. One loop.

WHAT RAI KNOWS

RAI starts by understanding your business. All of it.

YOUR COMPANY

- Company profile and products
- ICP and buyer personas
- Geography and micro-markets
- Brand voice and positioning
- Goals and growth plans

EVERY COMPETITOR

- The same full profile, per competitor
- Their products, ICP, personas
- Their geo and micro-markets
- Their voice and positioning
- Positioned against you

EVERY CHANNEL

- Channel analysis for you
- Channel analysis per competitor
- Where they win, where you can
- What each channel costs
- Which experiments to run first

This profile is not a form you fill once. RAI keeps it current from live signals, and every message it sends is grounded in it.

WHAT RAI RUNS

The whole demand engine, every account in parallel

INBOUND

- Ads: Google, Meta, Reddit, LinkedIn
- SEO, AEO, GEO
- Social media posts
- Community management
- Newsletters, hosted natively

OUTBOUND

- Email sequences
- LinkedIn InMail and messages
- Direct messages
- WhatsApp
- Calling

DEMAND GENERATION

- ABM across target accounts
- Drip marketing
- Cold outreach
- Signal-triggered plays
- One coordinated motion

Hundreds of thousands of personalised touches a night. Replies are drafted by RAI and approved by a human before they go out.

WHAT RAI CREATES AND MANAGES

Content at three levels of personalisation. Pipeline end to end.

CONTENT

Images, infographics, video, posts, newsletters, tutorials, in your brand voice.

Templates ladder:

1 Static templates

2 AI-assisted, live signals inserted

3 Fully personalised message per lead

CRM & PIPELINE

- Campaigns run and tracked in one place
- Funnel managed across ToFu, MoFu, BoFu
- Calendar booking straight to your reps
- Content calendar planned and maintained
- Every touch logged to account memory

HOW RAI IMPROVES ITSELF

It analyses, remembers, and runs its own experiments

Data-analyst agent

Logs, reports, and dashboards generated on demand. Ask a question, get the answer, not a BI backlog.

Deep-research & strategy agent

Researches markets, competitors, and channels, and plans the next move with you.

Memory on five axes

By account, user, session, campaign, and target group. Nothing learned is ever lost.

Self-run experiments

RAI identifies improvements, designs the tests, runs them, and promotes only proven winners.

Every send, reply, and meeting becomes training signal. The loop closes back into strategy.

Adya

Same 12,000 qualified leads. A fraction of the cost.

$166 → $0.33

cost per qualified lead

200 → 20

SDR seats to produce them

~$2M → ~$48K

annual top-of-funnel cost

~$0.01

per outbound reach-out

On this funnel math, the motion compounds toward ~6x annual pipeline: 36,000 meetings → 12,000 qualified leads → ~600 net-new customers a year.

Directional business case built on public information and stated assumptions, funnel math shown. Not measured customer outcomes.

WHY CMOS TRUST IT

Autonomous where it is safe. Human where it matters.

RAI publishes, listens, scores, routes

The volume work: research, lists, sequences, scheduling, measurement, reporting.

Humans approve every reply

When a prospect responds, RAI drafts. A human reviews and presses send. Always.

Your brand voice is enforced

Copy is grounded in your onboarding profile and positioning, not generic AI text.

Deliverability is protected

Warm-up, per-mailbox throttles, invite aging, and suppression rules guard your domain and your LinkedIn accounts.

Capacity you configure, not headcount you recruit.

RAI

It knows your company. It runs your channels. It improves itself.

Distribution at software cost.
