ADYA · RAS · RESEARCH, ANALYZE & STRATEGIZE

Ten subscriptions and a research team.

Or just ask RAS.

One platform that fuses your internal data, cited external research, and quantitative analysis into a single board-ready, auditable strategy artifact.

For CEOs, CIOs, and heads of research in evidence-driven businesses

THE PROBLEM

Information is fragmented. Decisions can't be.

Fragmented

Data lives in multiple systems, spreadsheets, decks, emails, and documents. Nobody sees the whole picture.

Hard to reconcile

Different definitions, formats, and reporting cadences. Two teams, two answers to the same question.

Time-consuming

Hours go into collecting, cleaning, and stitching before analysis even starts. Coverage queues behind headcount.

Signals hidden

The insights that matter are buried in decks, notes, contracts, emails, and filings nobody has time to read.

And the stakes are high: every call must survive a board, an investment committee, or a regulator.

BEFORE · HOW TEAMS COPE TODAY

Two ways to cope. Both partial.

PATH ONE · BUY MORE SUBSCRIPTIONS

Research platforms	AlphaSense · Hebbia
Analyst houses	Forrester · Gartner
Market data	Bloomberg · PitchBook · CB Insights · Statista
DIY AI research	ChatGPT · Claude · Gemini deep research
Analysis tools	Excel · Tableau · Power BI
Artifacts	PowerPoint · Word

Each covers a slice of the loop. None closes it.

PATH TWO · ADD MORE PEOPLE

In-house analysts	Coverage capped by headcount; work queues
In-house scientists	Expensive judgement spent on data janitoring
The data team	Every question becomes a ticket
Consultants	McKinsey · BCG · Bain, per engagement
Senior reviewers	Consistency depends on who checked it

Capacity is the bottleneck. Every deliverable takes weeks.

AlphaSense and Hebbia each cover a slice. Neither closes the loop. Neither does a bigger team.

AFTER · WITH RAS

RAS closes the loop. Your estate stays where it is.

RAS REPLACES

Enterprise search · finding what the firm already knows

External research · cited, triangulated, trust-scored

Data analysis · plain-English questions over your own data

Strategy synthesis · frameworks, options, evidence graph

Review & challenge · a ten-probe red team before you see it

Artifact production · print-grade, board-ready, on demand

Methodology & memory · doctrine engine + ESM reproducibility

THE RAIL THAT STAYS

Your document estate

drives, wikis, data rooms, filings

Your warehouse & databases

queried read-only, in plain English

Sources you already license

used and cited, not replaced overnight

Your deployment

SaaS, BYOC, on-prem, air-gapped

AFTER · WITH RAS

The same ten layers, run by RAS (L1 to L5)

L1 **Enterprise Knowledge Access**	**RAS runs it.** The Enterprise Search agent, always on: five-signal retrieval, a knowledge graph, a gap radar scoring what your corpus doesn't cover, any-format reading including audio and video.	RAIL Your document estate
L2 **External Research**	**RAS runs it.** The Deep Research agent: source trust scoring, claim triangulation with a two-independent-source minimum, citation grounding, and a spend governor with per-run caps.	RAIL Open web + licensed sources
L3 **Data Analysis**	**RAS runs it.** The Data Analyst agent: plain-English to SQL grounded in your schema (abstains when unsure), read-only safety and cost gate, ~60 chart types, metric library. World #3 on BIRD-Bench R-VES.	RAIL  Your warehouse & databases
L4 **Synthesis & Triangulation**	**RAS runs it.** Conflicts between sources are shown, not smoothed over. Every claim is checked against the source it cites before it enters the artifact.	RAIL **None needed**
L5 **Strategy & Frameworks**	**RAS runs it.** The Strategy agent, always on: SWOT, PESTEL, Five Forces, value chain and scenario 2x2, with an evidence graph binding every claim to a source or a figure.	RAIL **None needed**

One question. One pipeline. One auditable artifact.

AFTER · WITH RAS

The same ten layers, run by RAS (L6 to L10)

L6 **Review & Challenge**	**RAS runs it.** An adversarial review gate red-teams the argument with a ten-probe attack: pass, revise, or replan, before you ever see the output.	RAIL None needed
L7 **Artifact Production**	**RAS runs it.** Print-grade, board-ready artifacts on demand: strategy documents, initiation reports, IC memos, executive briefings, interactive dashboards.	RAIL None needed
L8 **Methodology & Consistency**	**RAS runs it.** The house doctrine engine learns your firm's own rules and enforces them, not suggests them. Consistent output across every analyst.	RAIL None needed
L9 **Auditability & Reproducibility**	**RAS runs it.** Every claim bound to a source or figure. Every artifact reproducible, diffable, forkable through event-sourced memory. Regulator-ready by default.	RAIL None needed
L10 **Memory & Reuse**	**RAS runs it.** ESM remembers every artifact and analysis. Past work is forkable, the doctrine compounds, and nothing leaves with the analyst.	RAIL None needed

One question. One pipeline. One auditable artifact.

HOW IT WORKS

Four specialist agents. One orchestrator.

ORCHESTRATOR · plans the run, routes the work, sequences the handoffs

1 · Enterprise Search

ALWAYS RUNS

Five-signal retrieval, knowledge graph, knowledge gap radar, any-format reading (PDF, Office, images, audio, video).

2 · Deep Research

CONDITIONAL

Source trust scoring, claim triangulation (two-source minimum), citation grounding, spend governor with caps.

3 · Data Analyst

CONDITIONAL

Plain-English to SQL, read-only safety and cost gate, ~60 chart types, metric library. World #3 BIRD R-VES.

4 · Strategy

ALWAYS RUNS

Framework lenses, evidence graph, ten-probe adversarial review gate, house doctrine engine.

House doctrine engine

Your firm's rules enforced, not suggested.

Adversarial review gate

Ten-probe red team: pass, revise, or replan.

ESM reproducibility

Every artifact reproducible, diffable, forkable.

Run all four as one pipeline, or trigger any single agent on its own.

WHAT YOU ASK IT FOR

Board-ready intelligence, on demand

Market research

Live market and trend synthesis

Competitive intelligence

Track and benchmark rivals

Strategic planning

Options, roadmaps, and bets

Board & investor reporting

Board-grade narratives

Risk & compliance

Assess exposure and controls

Customer & segment insight

Who to serve and how

Scenario modelling

What-if across futures

Executive briefings

On-demand, decision-ready

Diligence memos, initiation reports, credit and portfolio analysis, rating rationales: the same pipeline, your vertical.

Vertical skill packs at launch: PE & VC · Life Sciences

PROOF · BENCHMARKED AND DEPLOYED

Ranked in public. Trusted in production.

World #3

BIRD-Bench R-VES

text-to-SQL over real databases, listed as RAS / Adya AI

#5

BIRD-Bench Execution Accuracy

the Data Analyst agent's core skill, measured

10 probes

Adversarial review gate

every artifact red-teamed before you see it

In use today:

Global banks

including Goldman Sachs and BlackRock

Pharma

for new drug creation

Governments

for departmental and financial management

BIRD-Bench ranks as listed on the public leaderboard at submission (Aug 2026).

What changes for you

Coverage up, headcount flat

More companies, markets, and portfolios covered per analyst. Expansion stops meaning hiring.

Weeks → days

Initiation reports, diligence memos, and board narratives in days instead of weeks. Thinking starts on day one.

One artifact, two audiences

The same cited, reproducible document satisfies the board and the regulator. No parallel versions.

Every artifact compounds

The doctrine engine accumulates your methodology and ESM makes every analysis forkable. The function gets better every quarter.

A research and strategy function without the headcount.

WHY REGULATED BUSINESSES TRUST IT

Deploy anywhere. Audit everything.

Your data never leaves

SaaS, BYOC, on-prem, or fully air-gapped. Built for data that cannot leave the building.

Safe by construction

Read-only data access, query cost gates, and a research spend governor with per-run and monthly caps.

Every claim has a receipt

Two-source minimum, citation grounding, and an evidence graph binding every claim to a source or figure.

Your methodology, enforced

The doctrine engine learns the house view and applies it uniformly. Rating rationales and memos come out consistent.

Auditability is not a feature here. It is the product.

WHO RAS SERVES

Built for businesses that run on evidence

NBFCs & digital lenders

Loan-book questions in natural language, a regulator-ready trail behind every number.

Fintechs

Board-grade and regulator-grade analysis without a research team on the payroll.

AMCs & asset managers

More coverage per analyst, methodology consistency enforced by the doctrine engine.

Equity research firms

Faster initiations and updates, house methodology applied uniformly, every claim cited.

Credit bureaus & rating agencies

Analysis over sensitive data estates, on-prem or air-gapped, rationales reproducible and defensible.

BFSI (ex large banks)

Insurance, broking, wealth, small finance banks: deployment-agnostic, compliance-ready analysis.

Life sciences startups

A research and strategy function without the headcount, on the Life Sciences skill pack.

VC & PE funds

Compressed diligence, IC-grade memos, continuous portfolio monitoring, on the PE & VC skill pack.

India first. US second.

RAS

It searches. It researches. It analyses. It strategises. With receipts.

From everything you know to a board-ready decision.
