Six more being filed

ADOPTION

~96,000 developers

About 15,000 actively building

PARTNERS AND SHOWCASES

NVIDIA Google Microsoft accenture

Deployed across India, the US and Africa

Fifteen studios,
five layers, one fabric.

L5 · PLATFORMS	**SAI** Builds the full SDLC	**RAI** Runs go-to-market	**RAS** Research and strategy	**Karma** A personal agent
L4 · CHANNELS	**WhatsApp Studio** Agents on WhatsApp	**Voice Studio** Agents on the phone	**Communications** Slack, Teams, Discord	
L3 · DEPLOY AND SHARE	**Cloud Studio** Any cloud, including yours	**Marketplace** Publish, sell and learn		
L2 · BUILDERS	**AIA** Agents and workflows on demand	**Coding Agent** 38 sub-agents that ship code		
L1 · FOUNDATIONS	**Model Studio** Models on demand	**AI ELT** Any data, agent-ready	**ESM** Memory that learns	**AGP** Governance as code

Loosely connected, *they work as one.*

01 Loosely connected

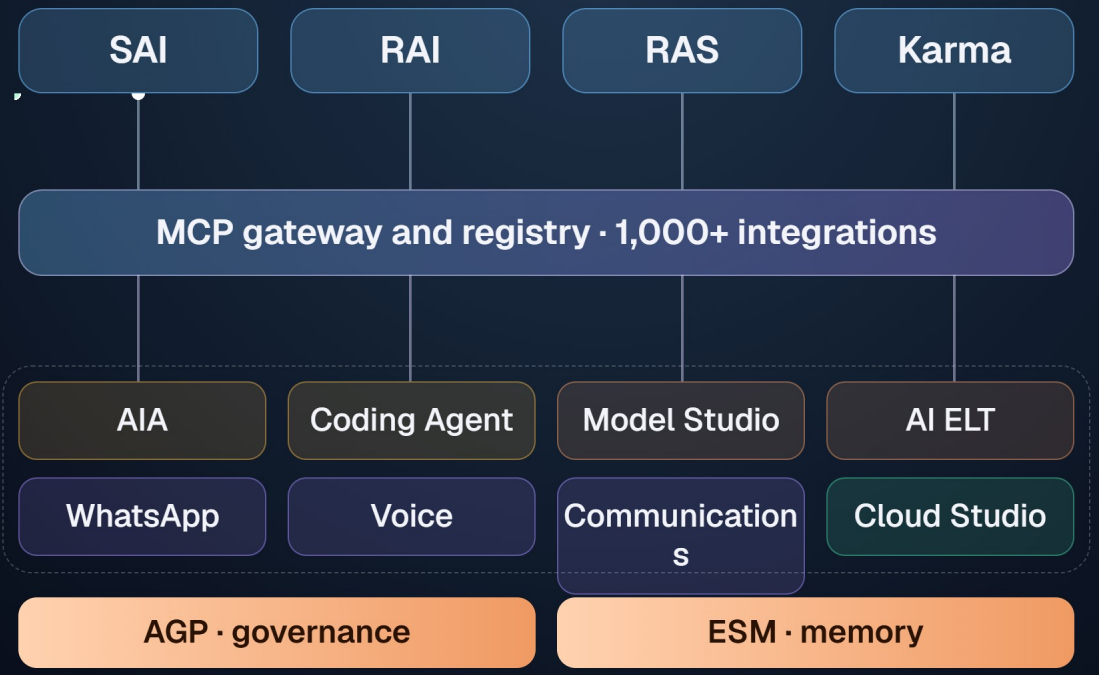

Each studio is a full agentic platform. Use one on its own, or all fifteen together.

02 They talk to each other

Studios call each other as agents and tools, through one shared MCP gateway and registry.

03 They create on demand

Need a WhatsApp agent, a workflow or a model in the middle of a task? It gets built on the spot.

Model Studio:
AI that builds your own model.

UNIQUE | PATENT FILING IN PROGRESS

WHAT IT DOES

01 Turns a plain request into a model spec

02 Finds, scrapes and synthesises its own data

03 Chooses from 171 base models, SLM and LLM

04 Trains with GPU acceleration and parallelism

05 Evaluates, then rolls back or retrains

06 Deploys the model and manages its scaling

WHY IT IS UNIQUE

171
base models, SLM and LLM

1B
parameters, on the edge

100B
parameters, in the cloud

Models on demand, no ML team
Describe the model you need. The studio plans it, sources the data, trains, evaluates and ships it, end to end.

It finds its own data
Searches open datasets and research papers, scrapes the web, and generates synthetic data to fill the gaps.

AI ELT:
any data, ready for agents.

UNIQUE

WHAT IT DOES

01 Unstructured to structured: PDFs, images, voice

02 Reads tables, charts and headers

03 Maps schemas across databases automatically

04 Builds and refreshes your data lake

05 Schedules runs so data stays fresh

06 Logs and audits every run

WHY IT IS UNIQUE

It understands data, not just moves it
AI reads each source, works out what it means and maps it to the target schema. No hand-built pipelines.

Always fresh
A scheduler keeps pulling new data, so agents never act on a stale copy.

Built for audit
Every run is logged with lineage, so you can show exactly where an answer's data came from.

ESM:
memory that learns, at lower cost.

WORLD #1 · AGENTIC MEMORY | PATENT PENDING | UNIQUE

WHAT IT DOES

01 Builds ontologies and knowledge graphs

02 Remembers by user, session, project, enterprise

03 Compacts context to what each decision needs

04 Learns continuously from every outcome

05 Keeps an immutable, auditable memory ledger

06 Plugs into any agent or app

WHY IT IS UNIQUE

#1
agentic memory benchmark

~70%
fewer tokens

10/10
Terminal-Bench tasks, up from 4/10

Decision fidelity
Picks the past events that make the agent decide as it would with its full history, at a fraction of the context.

Cost falls as memory grows
Gives the model the least context it needs for its best answer, so the cost of each task keeps dropping.

AGP:
rules that agents cannot break.

PATENT PENDING UNIQUE

HOW IT WORKS

01 Deep research gathers your policies and SOPs

02 Rules become runtime policy, in Cedar

03 Policy is verified with proofs in Lean 4

04 Compiled into a runtime package

05 Reads the user's intent at run time

06 Tests every action against the proven rules

WHY IT IS UNIQUE

Enforced in code, not in a prompt

If an action fails a rule, it does not run. Deterministic control over probabilistic agents.

One rulebook, four tiers

Geography, domain, use case and flow, with inheritance and overrides, across the whole enterprise.

Every decision on the record

Simulate, replay and trace any decision, with a full audit trail for compliance teams.

AIA:
describe the outcome, get the agent.

PATENT PENDING · ADVANCED

WHAT IT DOES

01 Turns intent into a working agent or workflow

02 Selects tools from 1,000+ MCP integrations

03 Connects to 100 databases

04 Routes each step across 350 LLMs

05 Validates and repairs the flow before it runs

06 Deploys it as an access-controlled endpoint

WHAT IS ADVANCED

1,000+ MCP integrations

100 databases

350 LLMs

No canvas to wire
Workflow builders give you boxes to drag. AIA reads the goal, picks the components and wires them itself.

Any platform can call it
SAI, RAI and Karma call AIA as an agent, so they can create a new workflow the moment they need one.

Coding Agent:
build it, break it, fix it.

#6 SWE-BENCH · AT LAUNCH | PATENT PENDING | ADVANCED

WHAT IT DOES

01 Writes the spec before any code

02 Codes module by module, in parallel

03 Writes and runs tests before it ships

04 Checks security on every change

05 Adversarial agents try to break the code

06 Reviews, diagnoses failures and improves

WHAT IS ADVANCED

#6
SWE-Bench, at launch, March 2026

38
sub-agents

Deterministic protocols
The 38 sub-agents run under fixed protocols, so the same input follows the same path every time.

It heals and remembers
When a build fails, a root-cause agent diagnoses it and retries, and the fix is remembered for next time.

Cloud Studio:
any cloud, including yours.

PATENT PENDING · ADVANCED

WHAT IT DOES

01 AWS, Azure and Google Cloud, one console

02 40+ data centres, with region choice

03 SaaS, PaaS, private cloud, on-prem or edge

04 VMs, Kubernetes, serverless and GPUs

05 Observability and logs built in

06 Live pricing across clouds and regions

WHAT IS ADVANCED

3
clouds, one console

40+
data centres

Your data stays in your tenancy
Adya runs only the management plane. Your workloads and data live in your own cloud account.

GPUs on demand
Training environments, including distributed multi-node, as GPU-as-a-service, priced across clouds.

Marketplace:
publish, sell and learn.

ADVANCED

WHAT IT DOES

01 Publish agents, apps, workflows and models

02 Sell skills and AGP templates

03 Payouts to publishers

04 Community and leaderboards

05 A learning management system

06 Courses and co-branded certifications

WHAT IS ADVANCED

~96K
developers use Adya

~15K
actively building

1000s
of projects live

Builders earn first
Adya takes a 15% commission only when a member earns from a solution.

Reuse before you build
Karma and AIA check the marketplace for an existing solution before they build a new one.

WhatsApp Studio:
agents where customers already are.

ADVANCED

WHAT IT DOES

01 Conversational agents for sales and support

02 Marketing campaigns and broadcasts

03 Forms and onboarding inside the chat

04 Catalogues and checkout for e-commerce

05 Communities and groups at scale

06 WhatsApp calling

WHAT IS ADVANCED

Built on demand, not configured
Describe the journey and the studio builds the agent, its flows and its forms. No bot builder to learn.

A full agent other platforms call
RAI runs campaigns through it, Karma messages for you through it, and SAI adds it to any app it builds.

Governed and remembered
Plug in AGP to keep every message within policy, and ESM to remember each customer across chats.

Voice Studio:
agents that pick up the phone.

ADVANCED

WHAT IT DOES

01 Voice agents for inbound and outbound calls

02 Telephony integration

03 Call centre automation at scale

04 Agents that finish tasks during the call

05 Real-time speech to speech, under 2 seconds

WHAT IS ADVANCED

It acts, not just talks
A voice agent can call any tool on the platform, so it books, updates and resolves while the caller is on the line.

One agent, used by every platform
RAI uses it for sales calls, Karma makes calls for you with it, and SAI can put it inside any app.

Policy on every call
Plug in AGP to control what the agent may say and do, and ESM to carry context from one call to the next.

Communications:
agents in Slack, Teams and Discord.

ADVANCED

WHAT IT DOES

01 Agents inside Slack

02 Agents inside Microsoft Teams

03 Agents inside Discord

04 More team and community channels

05 Ask questions and run tasks from chat

06 Updates and alerts posted by agents

WHAT IS ADVANCED

Work where your teams already work

No new app to adopt. Any agent built on Adya can live in the channels your people already use.

One agent, every channel

The same agent can answer on Slack, Teams, Discord, WhatsApp and voice, with ESM keeping one memory.

Permissions follow the person

Teams connect under their own permission levels, so each person only reaches what they are allowed to.

SAI:
the full lifecycle from one prompt.

#8 TERMINAL-BENCH · AT LAUNCH | MAN · PATENT PENDING | SAI · PATENT FILING IN PROGRESS

ONE LIFECYCLE, EVERY STUDIO

01 PRD and architecture from one prompt

02 High-level, low-level and UX design

03 Code from the Coding Agent

04 Workflows from AIA, data from AI ELT

05 WhatsApp and voice agents built in

06 Governed by AGP, deployed by Cloud Studio

WHAT SETS IT APART

#8
Terminal-Bench, at launch, March 2026

~2 hrs
from one prompt to a working build

80–90%
of the work done by agents

Months of work, in hours
What usually needs a 10 to 15 person team for six months, SAI builds from one prompt and runs in production.

MAN: no central bottleneck
Hundreds of agents coordinate peer to peer. In our tests: 10 of 10 Terminal-Bench tasks, LangGraph 0 of 10.

RAI:
go-to-market, run by agents.

PATENT FILING IN PROGRESS | ADVANCED

WHAT IT DOES

01 Learns your company, products and brand voice

02 Maps competitors, markets and channels

03 Sets goals and builds the GTM strategy

04 Creates content, social posts and videos

05 Finds leads, signals and buying committees

06 Runs email, LinkedIn, WhatsApp and calls

07 ABM, drip and demand generation

WHAT IS ADVANCED

One loop instead of 20 tools
RAI replaces the research, planning, execution and analytics spread across 20+ go-to-market tools.

It improves itself
It runs experiments, tracks what converts and updates its own playbook.

It calls the channel studios
RAI uses the WhatsApp and Voice studios as agents to reach buyers on every channel.

RAS:
answers from your company brain.

WORLD #3 · BIRD-BENCH | PATENT FILING IN PROGRESS | UNIQUE

WHAT IT DOES

01 Company brain: a knowledge graph of your data

02 Enterprise search, ten search types at once

03 Gap analysis across what you know

04 Deep research with traced citations

05 Data analyst: plain English to SQL

06 Strategy documents, reviewed adversarially

WHY IT IS UNIQUE

#3
BIRD-Bench, R-VES

#5
BIRD-Bench, execution accuracy

10
search types in parallel

Inside and outside, in one answer
It combines your own data, cited outside research and analysis into one print-ready strategy document.

Built for high-stakes decisions
Designed for pharma, government and investment teams, where every claim must trace back to a source.

Karma:
a personal agent for every employee.

ADVANCED RUNS ON THE OTHER 14 STUDIOS

Karma working for you

Book my Bangalore trip for Thursday and tell the team.

- Flight booked, 7:05 AM, window seat
- Calendar updated and hotel held
- Team told on Slack, with the plan

Ready to pay for the flight **Approve**

Karma sits on the other 14 studios, so it can build whatever it cannot yet do.

Every surface
Desktop, browser and mobile

Messages and email
WhatsApp, email and Slack

Plans your day
Calendar, bookings, tasks

Enterprise systems
Under controlled access

Builds new skills
Via AIA, Coding and Cloud

Remembers
You and your company

SCORECARD

Fifteen studios *at a glance.*

Studio	Benchmark	Patent	Standing

* Global rank at launch, March 2026. MAN, the multi-agent network inside SAI, is patent pending.

F = COGSS:
what the fifteen add up to.

C
Cost
Your own model cuts cost by up to 90%, and ESM trims tokens by about 70%.

MODEL STUDIO · ESM

O
Ownership
Your models, data and memory stay yours, in your own cloud tenancy.

CLOUD STUDIO · MODEL STUDIO

G
Governance
AGP turns policy into rules that are checked before any action runs.

AGP

S
Scale
Hundreds of agents coordinate peer to peer, with no central bottleneck.

SAI · MAN · AIA

S
Sovereign
Run on-premises or in your region, across three clouds and 40+ data centres.

CLOUD STUDIO

Fifteen studios.
One fabric.
Anything, on demand.

Thank you.
