# Why teams choose RAS over a general AI assistant

RAS turns a plain-language business question into a finished, board-ready deliverable — a market assessment, a diligence brief, a competitive review — built from your own knowledge and data, with the evidence attached.

| WHAT YOU CARE ABOUT | GENERAL AI ASSISTANTS<br>ChatGPT · Claude · Copilot | RAS BY ADYA<br>Governed decision work |
|---|---|---|
| **Can I trust the numbers?** | The AI writes confidently; you verify every claim yourself. | Won't deliver until every claim and number links to its source — down to the page and row. **Checked by software, not by trust.** |
| **What if it's wrong?** | Mistakes look as confident as facts; you catch them in review. | Every deliverable passes an independent 10-point review before it ships. **If it fails, a person is asked — it never goes out quietly.** |
| **Does it know *my* business?** | Knows the internet, plus whatever you paste into each chat. | Builds a private knowledge base from your documents and data — and **gets sharper with every question you ask.** |
| **Does it admit what it doesn't know?** | Fills gaps with plausible guesses. | Tells you exactly what your internal data couldn't answer — then **researches only those gaps, within a budget you approve.** |
| **Is my data safe?** | Shared service; you rely on the vendor's policy. | Your data sits in its own separate store, and the AI runs on your own provider account. **Nothing is shared across customers.** |
| **Who's accountable for the answer?** | No record of how the answer was made. | A full trail behind every deliverable: **who asked, what was read, what was spent, who approved.** |
| **What do I actually get?** | A chat answer you still have to turn into a document. | A finished, board-ready deliverable — **with the evidence attached.** |

**Where the value shows up:** teams typically spend 60–120 hours assembling a deliverable like this. On RAS, the human time is framing the question, approving spend, and the final review — **decisions in days, not weeks.**

**The AI does the assembly. Your team makes the decisions. Software guarantees the evidence.**
