CASE STUDY

Unified AI GTM Agent Platform

EXECUTIVE SUMMARY

Problem: Fragmented GTM tools causing inefficiency and poor visibility.

Solution: Built a unified AI-powered modular GTM platform integrating Sales, Marketing, Support & Analytics.

Outcome: Reduced manual effort by 40% and accelerated campaign execution by 60% with real-time intelligence.

1. Problem Statement

Industry / Customer Context

Sector	B2B Go-To-Market (Sales + Marketing + Support)
Target Users	Growth-stage startups & mid-sized teams
Geography	Multi-region digital operations
Team Size	10–100 GTM stakeholders (SDR, Marketing, Support, Ops)

Core Problem Identified

GTM workflows were fragmented across multiple disconnected tools — CRM, campaign tools, analytics dashboards, support inboxes, and calling systems — with no unified intelligence layer.

Supporting Data Points (Baseline Before Intervention)

- 6–8 tools used daily across teams
- 35–45% time spent on manual data entry & reconciliation
- 20–30% lead data duplication across systems
- 2–3 day lag in cross-team handoffs
- No unified ICP scoring or funnel intelligence

Why It Mattered

- Slow GTM execution speed
- Poor visibility on funnel performance
- Inconsistent customer engagement

- High operational overhead
- Limited data-backed decision-making

Strategic Risk: Reduced competitiveness in fast-moving markets due to lack of automation and intelligence.

---

2. Impact of the Problem

(Functional, Emotional & Social Pain)

Operational Pain

- Manual lead syncing between CRM, campaigns, and support
- Inbound emails/WhatsApp not auto-routed to pipeline
- Campaign personalization done manually
- Voice call logs not integrated with analytics

Result: 30–40% productivity drain across GTM roles.

Emotional Impact

- Leadership lacked real-time funnel visibility
- Teams operated in reactive "firefighting mode"
- Decision-making based on intuition, not insights

Social / Organizational Consequences

- Friction between Marketing & SDR over lead quality
- Support tickets not linked to sales context
- Misalignment on ICP targeting

Cost of Inaction

If unchanged:

- 25–35% slower pipeline velocity
- Increased CAC due to poor targeting
- Scaling beyond 100K leads becomes operationally unstable
- AI adoption gap vs competitors widens

---

3. Solution Provided

(Pain Relievers & Gain Creators)

Solution Overview

Developed a Unified AI GTM Agent Platform integrating Sales, Marketing, Support, Research, and Analytics into a modular microservices architecture with shared context intelligence.

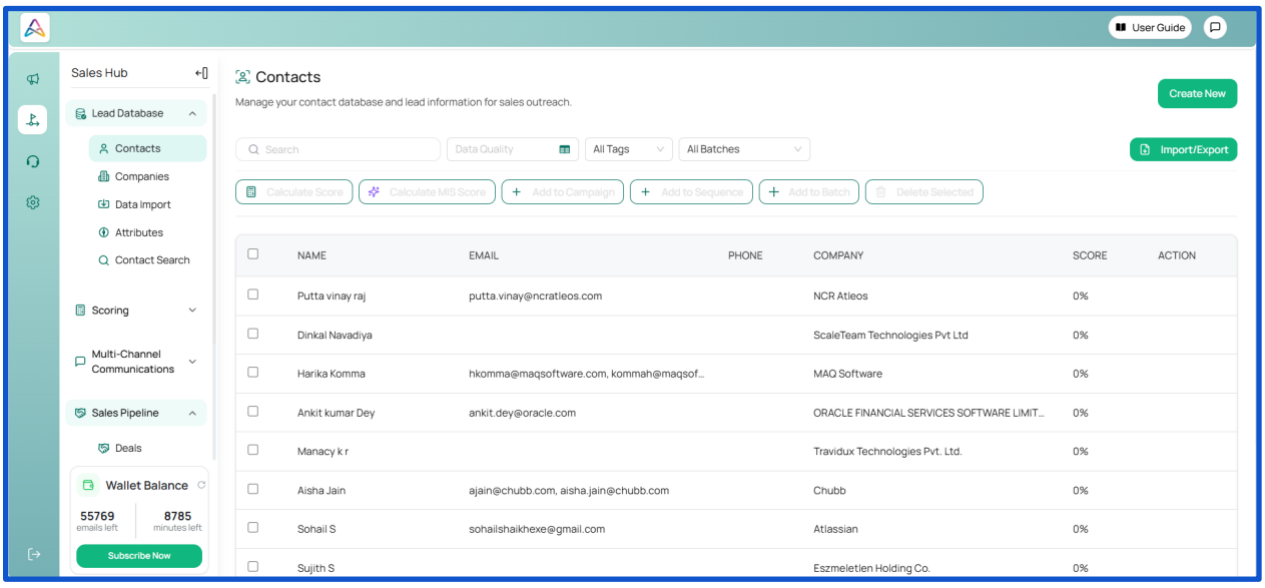

Key Features Implemented

1. Leads & Pipeline Hub

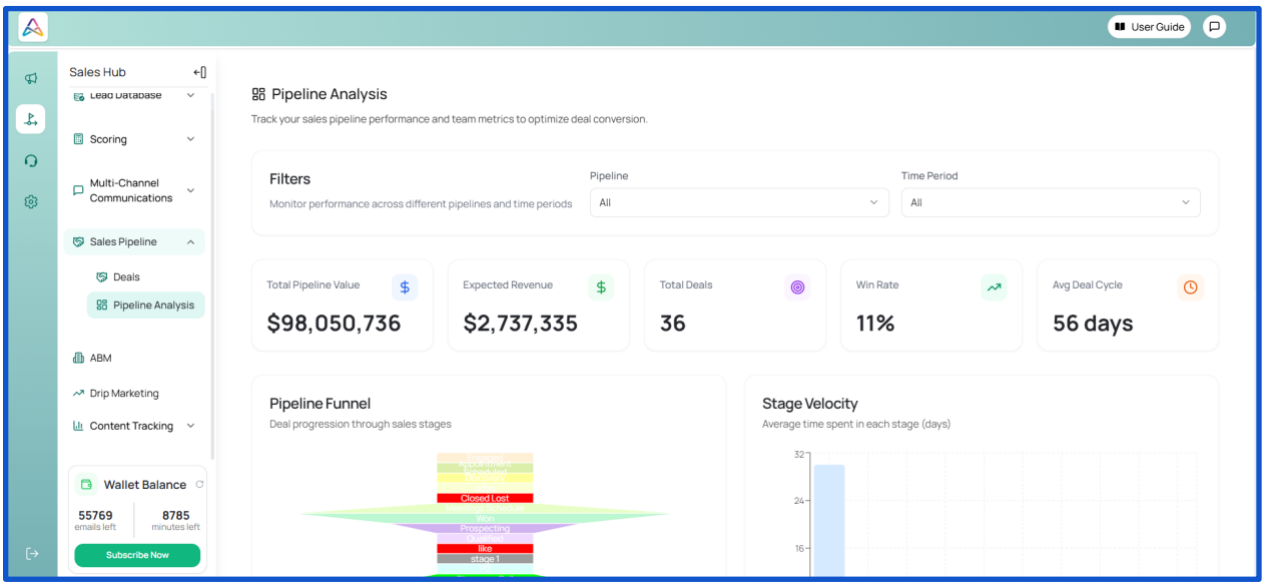

→ Auto-capture inbound email & WhatsApp

→ Kanban pipeline with contextual AI scoring

Pain Relieved: Manual lead routing eliminated

Adya

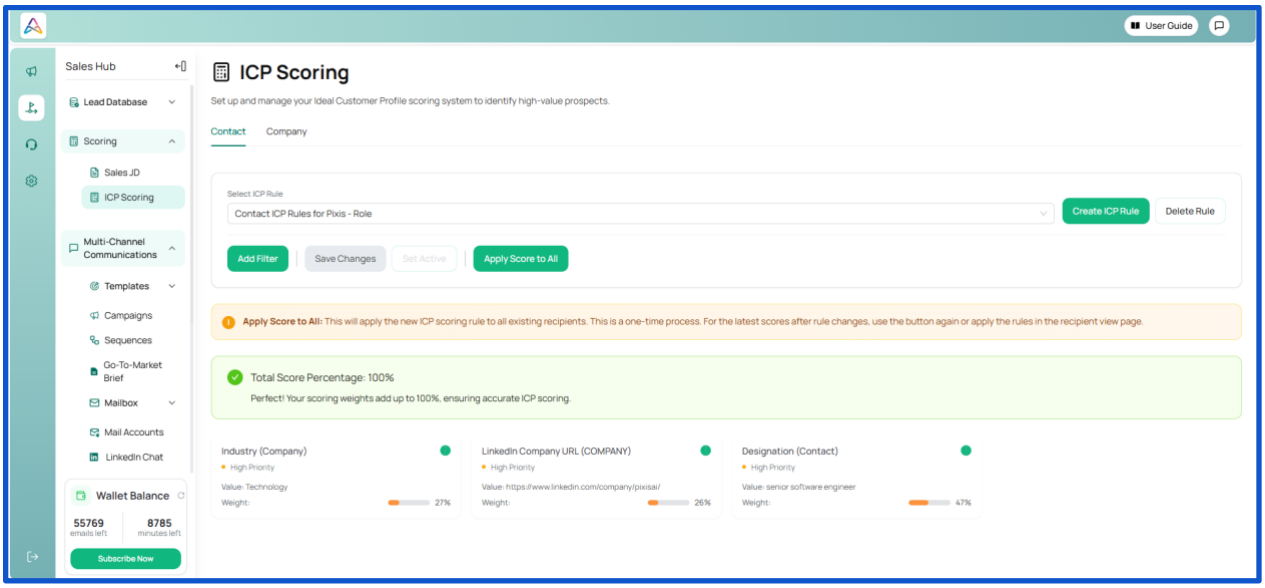

2. Audience & Scoring Hub (Research Agent Embedded)

→ AI-based ICP segmentation

→ Fit + Intent scoring

Gain Created: Improved targeting precision

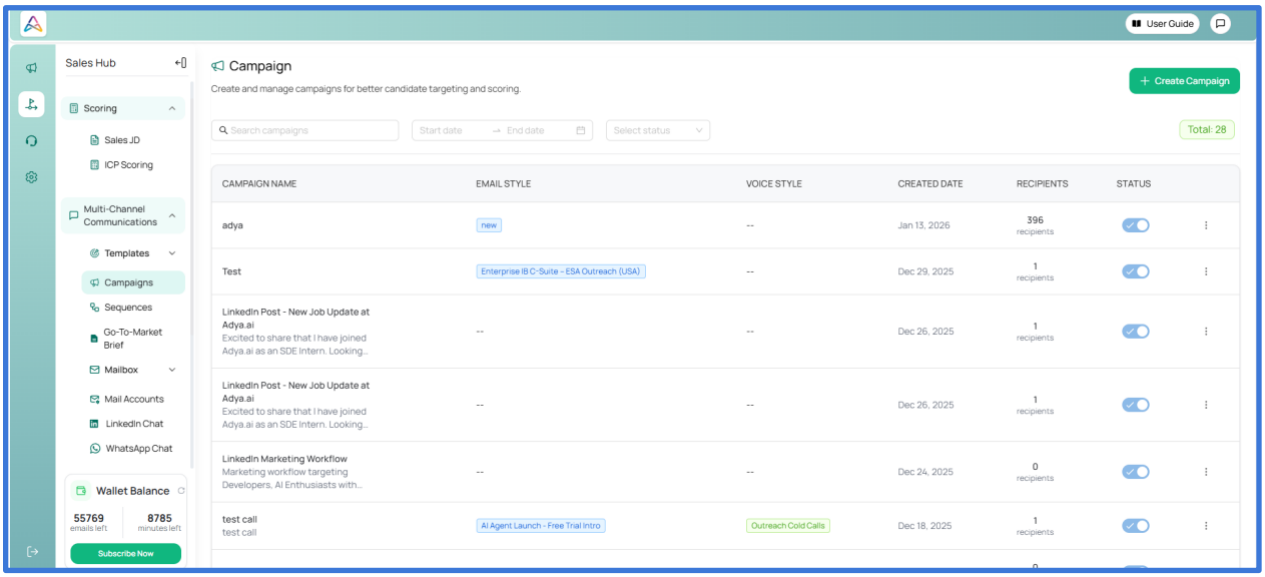

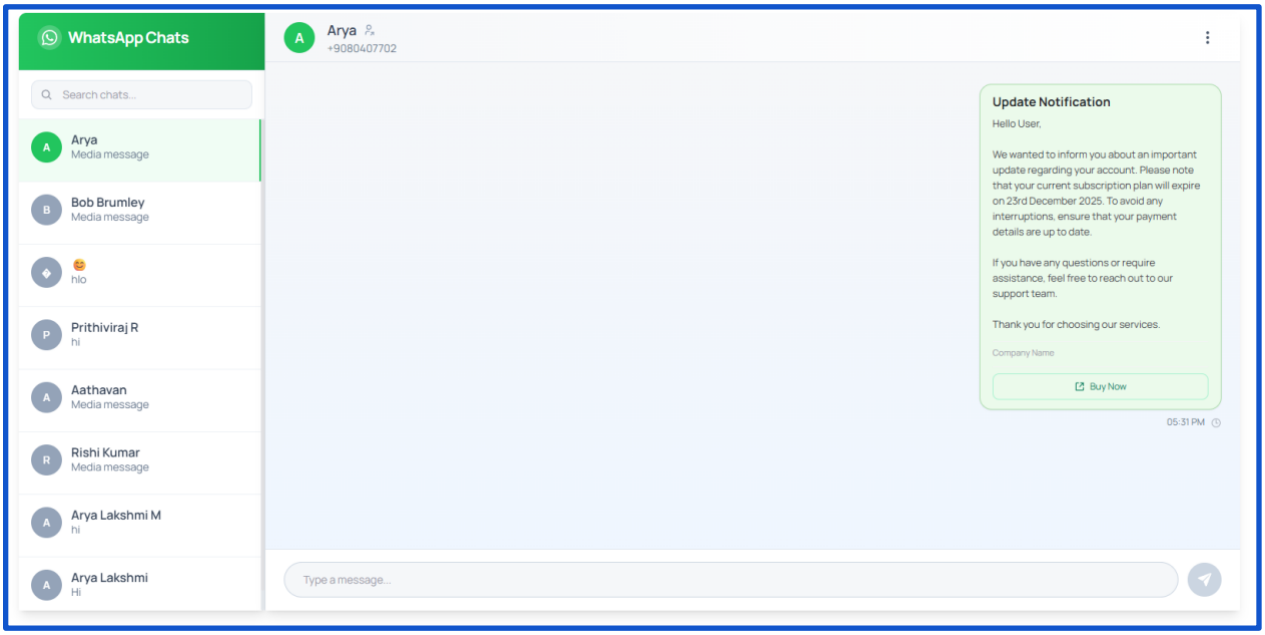

3. Content & Campaign Hub

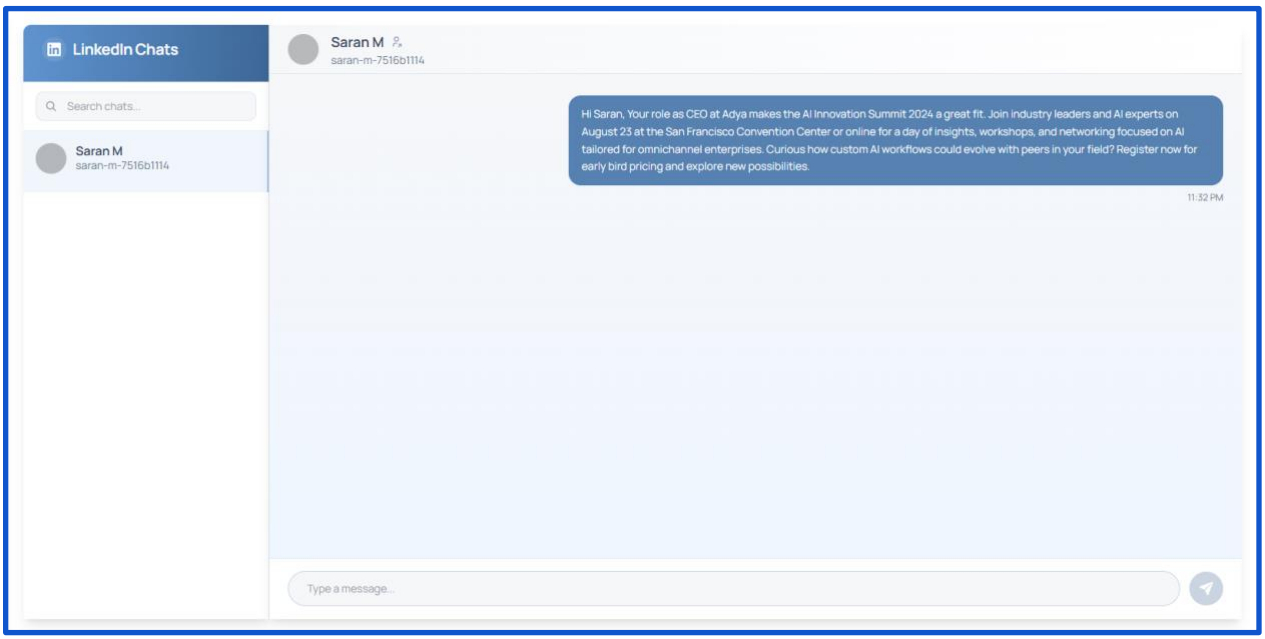

→ Multi-channel sequence builder

→ AI-generated brand-aligned content

Efficiency Impact: Reduced campaign creation time by 60%

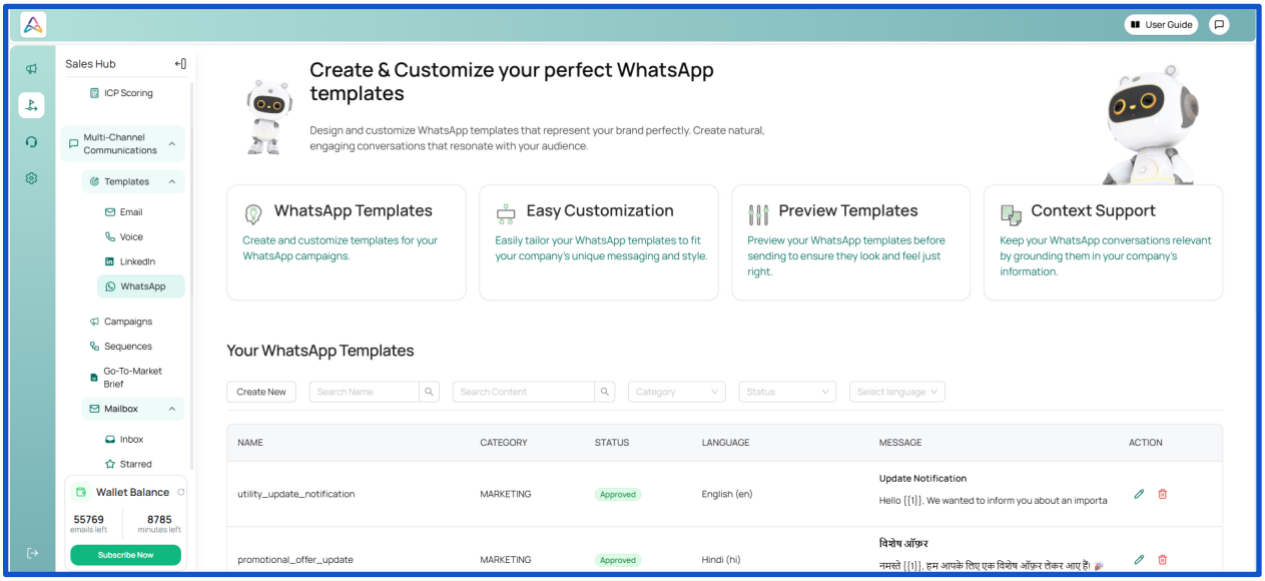

---

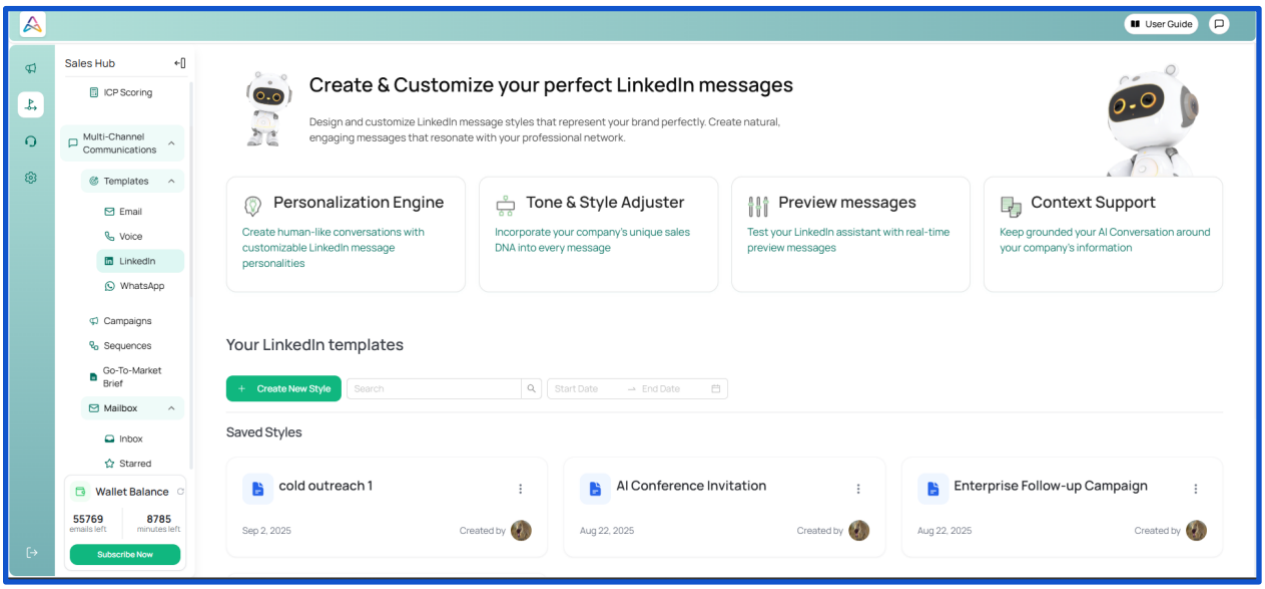

4. Engagement & Delivery Hub

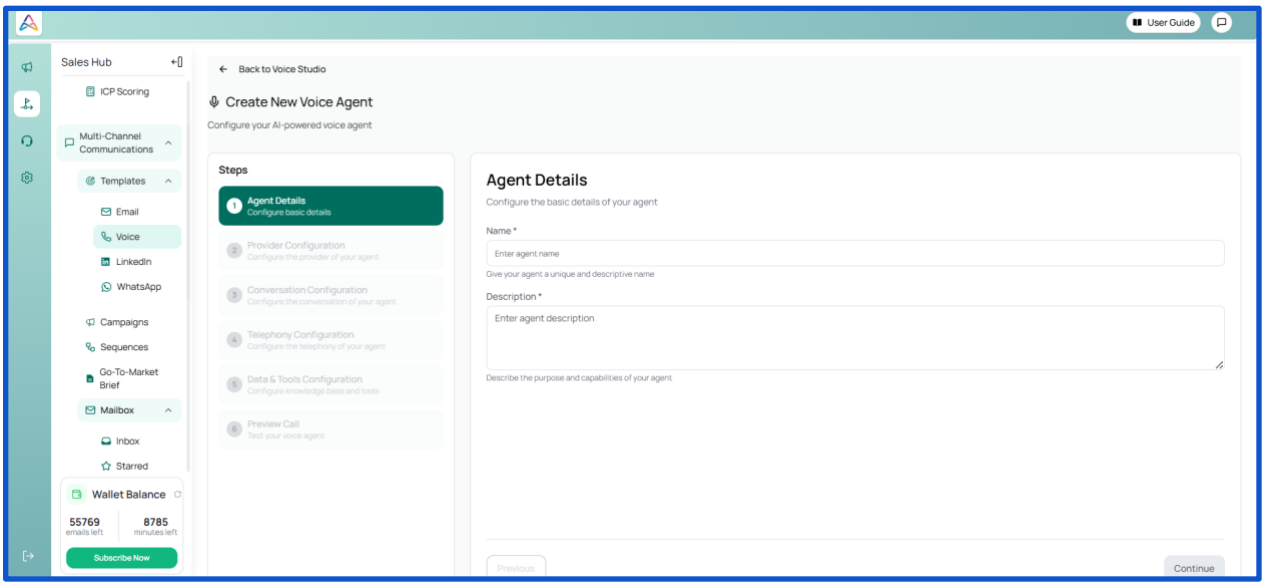

→ Unified email, LinkedIn, WhatsApp, and call logs

Gain Created: 360° engagement visibility

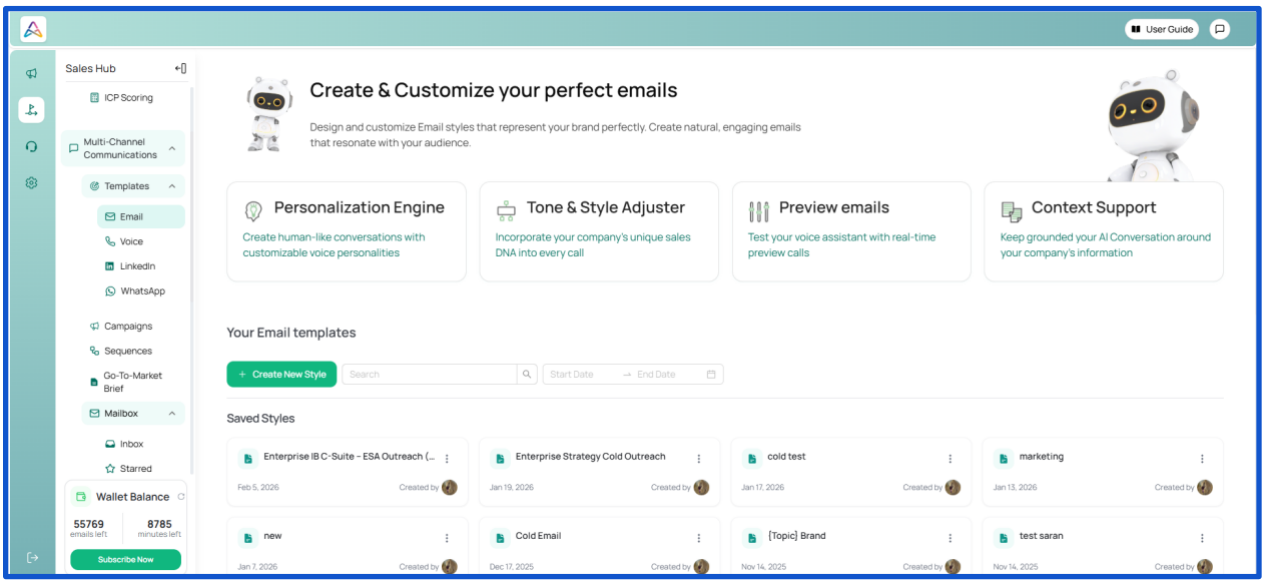

Adya

5. Dashboard & Insights Hub (Data Analyst Agent)

→ Funnel analytics

→ Velocity & conversion intelligence

→ Automated GTM recommendations

Impact: Real-time decision-making layer

6. Voice-to-Voice Agent (V2V)

→ AI-powered calls via Twilio + LiveKit

→ Context memory stored in Milvus

Gain Created: Automated outbound calling intelligence

AI Agent Architecture

The platform is powered by three core AI agents — each purpose-built for a distinct GTM function and operating in sync across the shared intelligence layer.

7. Marketer Agent – Content Creation & Content Distribution

→ Content Creation: AI-generated brand-aligned copy across formats (blogs, ads, emails, social)

→ Content Distribution: Multi-channel publishing across LinkedIn, email, WhatsApp, and web

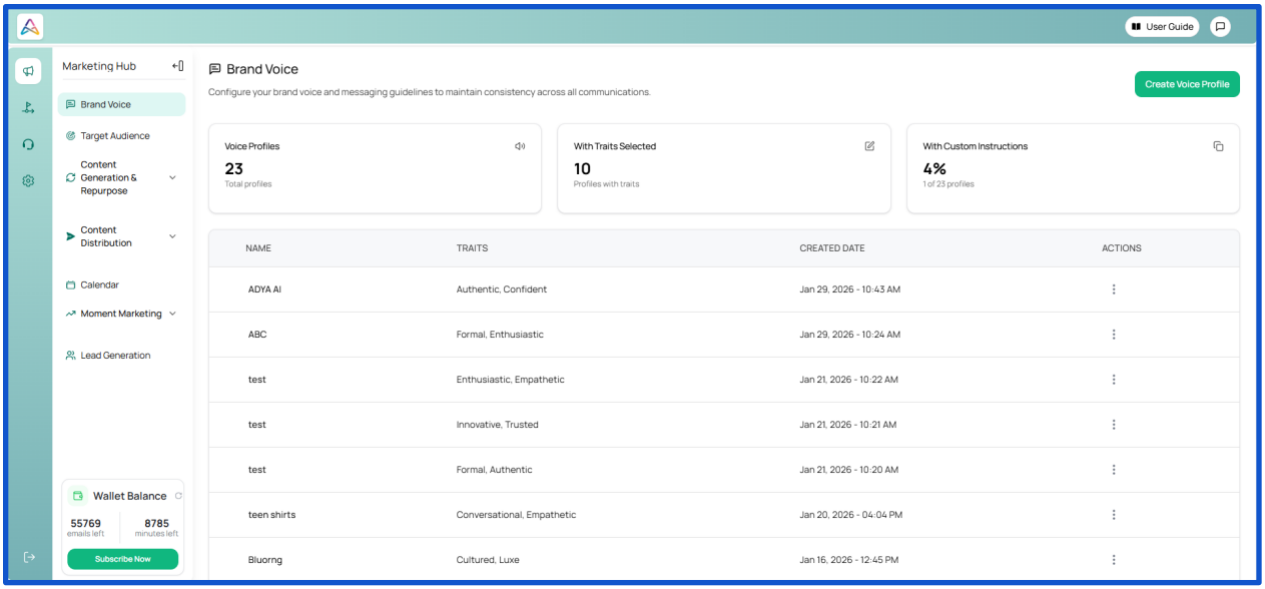

→ Campaign Sequencing: Automated drip flows with personalization at scale

→ SEO & Keyword Intelligence: Content optimized for discoverability and engagement

→ Performance Tracking: Content engagement metrics fed back into campaign strategy

Pain Relieved: Manual content creation and inconsistent distribution eliminated

Gain Created: Faster go-to-market with consistent, on-brand messaging across all channels

8. Sales Agent – Campaigns, Sales, Lead Generation & Customers

→ Lead Generation: AI-powered ICP identification, enrichment, and scoring

→ Campaign Execution: Automated outbound sequences via email, LinkedIn, and WhatsApp

→ **Pipeline Management:** Stage-wise funnel tracking with AI-recommended next actions

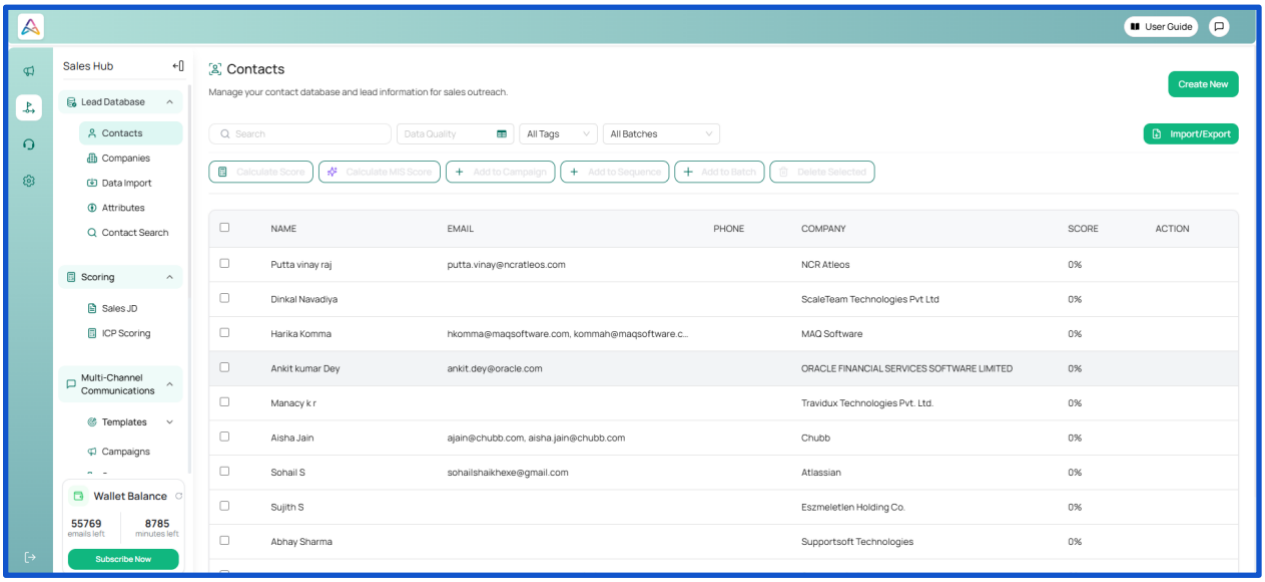

→ **Customer Intelligence:** 360° customer context from first touch to closed deal

→ **Analytics Layer:** Conversion rates, velocity metrics, and revenue forecasting

→ **CRM Sync:** Real-time data reconciliation across sales tools

Pain Relieved: Disconnected lead gen, manual follow-ups, and siloed sales data

Gain Created: End-to-end sales intelligence from prospecting to close with predictable pipeline visibility

---

9. Customer Agent – Multi-Channel Engagement & Support

→ **WhatsApp:** Automated inbound handling, query resolution, and proactive nudges

→ **Voice:** AI-powered calls via V2V agent with context memory (Twilio + LiveKit)

→ **Email:** Smart response generation and follow-up automation

→ **LinkedIn:** Engagement tracking and conversation management

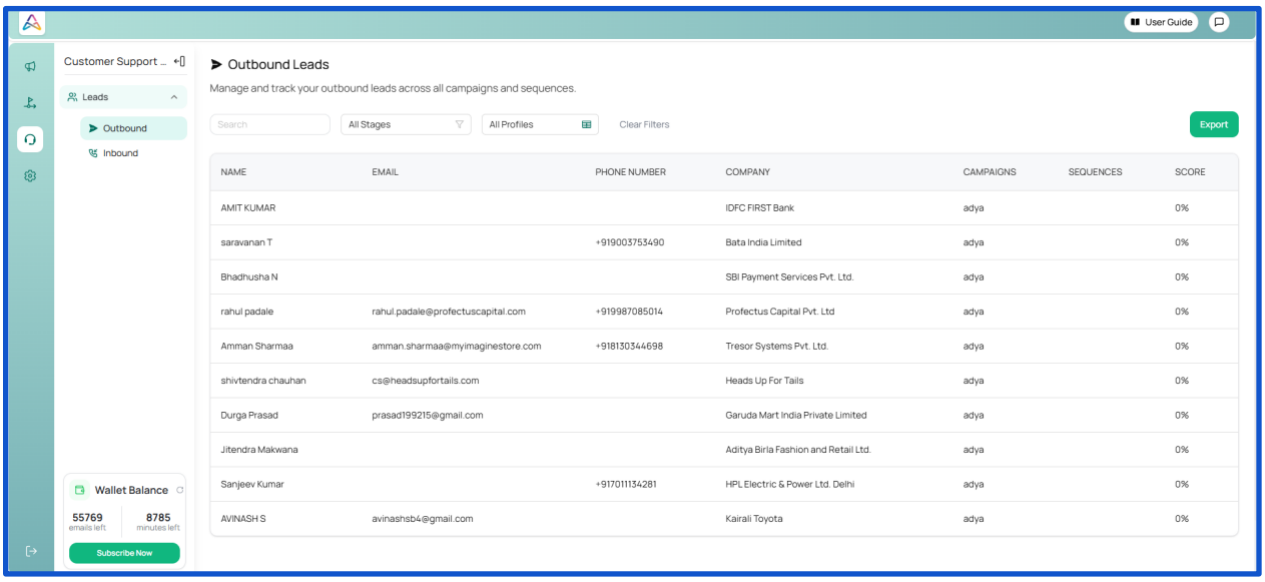

→ **Additional Channels:** Extensible to SMS, chat widgets, and future platforms

→ **Support Layer:** Ticket routing, resolution tracking, and escalation management

→ **Unified Context:** Full conversation history shared across channels for seamless CX

Pain Relieved: Fragmented customer interactions across tools with no shared context

Gain Created: Consistent, personalized customer experience across every touchpoint — from first outreach to post-sale support

Implementation Approach

- Timeline: 12–16 weeks phased rollout
  Phase 1: Core backend + Gateway architecture
  Phase 2: Marketing AI & Scoring engine
  Phase 3: Voice AI + Integrations
  Phase 4: Unified dashboard & analytics layer

Integration Complexity: Moderate–High (multiple APIs, OAuth flows, AI services)

Change Management Strategy:

- Hub-based UI for intuitive adoption
- Guided onboarding
- Modular rollout per team

Technical Capabilities & Architecture

- Microservices architecture (Node.js, Python, Go)
- Central API Gateway orchestration
- MongoDB + Redis caching
- Vector memory via Milvus
- AI layer powered by Azure OpenAI
- Web intelligence via Jina AI
- AWS S3 for secure file management

Scalable to:

- 100K+ leads
- 10+ active campaigns
- <2s analytics query response time

4. Outcome (Quantified Results)

Measurable Results

Metric	Result
Reduction in manual GTM operations	40%
Faster campaign creation cycle	60%
Improvement in pipeline visibility	35%
Reduction in cross-tool switching	50%
Faster research & ICP enrichment	70%

Strategic Impact

- Improved GTM execution speed
- Better ICP targeting accuracy
- Centralized intelligence layer
- AI-driven personalization at scale
- Competitive differentiation via automation

Human Impact

- Reduced operational stress
- Improved collaboration between Sales, Marketing & Support
- Leadership gained real-time decision dashboards
- Teams shifted from reactive to proactive execution
