Post Message: Over the past few weeks, I immersed myself in building, stress-testing, and rethinking what it actually takes to deliver an AI product end-to-end.
As part of my journey with Adya, I worked on creating an AI-driven Memory Guardian — a system built to move beyond reactive reminders and toward predictive, context-aware assistance.
This wasn't about impressive demos. It was about building something practical, reliable, and aligned with real user behavior.
Key lessons from the process:
• Systems architecture matters more than isolated models • Clear problem definition beats complex algorithms • Users behave unpredictably — design for that • Early validation saves months of rework • Shipping constraints force smarter engineering decisions
What changed for me?
AI is a tool. Product thinking is the differentiator.
Grateful for the mentorship, feedback, and the push to focus on execution over endless experimentation.
Next step: refine, iterate, and ship. Adya

Post Message: Spent the last few weeks building, breaking, and rebuilding—and in the process, gaining a much deeper understanding of what it really means to ship AI products. Through the journey with Adya, the focus was on developing a Trade Analysis Agent—an AI system designed to move beyond basic insights and provide smarter, data-driven decision support. The goal wasn’t to create flashy demos, but to solve a real problem with clarity, purpose, and execution. Key takeaways from the experience: • Think in systems, not just models • Focus on the problem before the algorithm • Design for real users, not ideal scenarios • Validate early and iterate quickly • Build with deployment in mind from day one The biggest shift? AI is powerful—but product thinking is what makes it truly impactful. Grateful for the exposure, mentorship, and the push toward execution over experimentation. Now, it's time to refine, iterate, and ship.

Post Message: Grateful for an incredible learning journey at Build @ India Digital Summit & Hackathon 🚀 Huge thanks to IAMAI for organizing such a powerful and impactful event that truly bridges industry, innovation, and real-world technology. Events like build@ India Digital Summit create a strong platform for learners and builders to grow. Special appreciation to adya.ai for their amazing AI tools and demos — the hands-on exposure gave deep insights into how AI is being applied in real products today. Truly inspiring work by adya.ai 👏 A sincere thank you to RGESIndia for the continuous support, mentorship, and encouragement throughout the event. The guidance and industry perspective from RGESIndia made a big difference in our learning experience. Heartfelt thanks to Prasad Anumula PMP®, CISM(Q), LSSBB sir and Shayak Mazumder sir for their valuable guidance, insights, and motivation. Learning under your mentorship helped sharpen both technical thinking and problem-solving skills. Once again, thanks to IAMAI, build@ India Digital Summit, adya.ai, RGESIndia, and the entire India Digital Summit organizing team for hosting such a meaningful summit and hackathon. This experience significantly boosted my technical skills, confidence, and industry understanding. Looking forward to building more, learning more, and contributing better 🚀✨ #BuildAtIDS #IDSIndia #IndiaDigitalSummit #IAMAI #AdyaAI #RGESIndia #AI #Hackathon #Innovation #TechLearning #SkillDevelopment #Grateful #Community

Post Message: The week that was ... #IndiaAISummit2026 (#PersonalOpinion) 🫡
#IndiaStartup Participation Numbers 📊

👉Total Participating Startups: More than 600 startups are actively participating in the summit
👉AI Impact Repository: A new repository was launched mapping 110+ AI startups and non-profits specifically delivering population-scale social and economic impact across India
👉Indigenous Innovation: Homegrown startups and consortia unveiled 12 indigenous foundation models trained on Indian datasets across 22 official languages
👉Exhibitor Breakdown: The expo features roughly 300 exhibitors from 30 nations, many of which are high-potential startups showcasing "super-utility" AI solutions
A walk down Hall 5 ground floor and Hall 6 (highly recommended) filled me with Euphoria and Excitement alike 🫶 and as I'm also involved in startup due diligence on #AgenticAI in my charter , this was an opportunity not to be missed ✨
Here's (m)y call out of the top 6 solutions I saw (in random order) and their CEOs/ CXOs I met (from the horses mouth) who are poised to revolutionize #AiforAll from 🇮🇳 to 🌍
CoRover with Ankush Sabharwal
gnani.ai with Ganesh Gopalan
C2C Advanced Systems with Cmde S K Pujari
Sarvam with Pratyush Kumar (missed meeting in person)
Wadhwani AI with Balaraman Ravindran (missed meeting)
Adya with Shayak Mazumder
So be mindful of the #SignalToNoise ratio in the media else you may " Miss the Wood for the Trees..."
Share your ✋ #HighFives LinkedIn as everyone who participated need a cheer 💫

Post Message: This was such an immense opportunity to meet Shradha Sharma, the founder of YourStory Media.
Shradha is an inspiration to all founders in India. She has been supporting start-ups with all her effort for the last two decades.
I find people like Shradha have been doing an unpaid service to start-ups like us.
I absolutely loved our interaction. I got a chance to position Adya.
One of the key comments that I made was that 99% of the solutions I've seen at the India AI Impact Summit can be built in a few months by a few developers on the Adhya platform.
It's a platform where anybody can build anything by asking the AI. The AI does the orchestration and the building for you.
Imagine if there exists a platform from India that combines the best of Claude Code + N8N + Replit and put it into one, where you can also build your own models and LLMs, what would be the impact?
That platform exists. It's called Adya. In the last 3 months, about 20,000 agent systems have been built on Adya.
So cheers to YourStory Media, cheers to Adya, and cheers to innovation from India!

Post Message: Grateful for an incredible learning journey at BUILD India Digital Summit 2026 & Hackathon 🚀✨ A huge thank you to Internet and Mobile Association of India for organizing such a powerful and impactful platform that truly bridges industry, innovation, and real-world technology. BUILD India Digital Summit created an environment where ideas were not just discussed but built, tested, and demonstrated.

Special appreciation to Adya 💫✨ for their impressive agentic AI platform and hands-on demos. The platform gave us practical exposure to how autonomous agents, workflows, and decision-driven AI systems are designed and orchestrated in real products not just concepts. Truly inspiring to see agentic AI applied at scale 👏🏻
A sincere thank you to RGESIndia for the continuous support, mentorship, and encouragement throughout the event. The guidance and industry perspective played a key role in shaping our technical thinking and execution approach. Heartfelt thanks to the jury and mentors: Prasad Anumula PMP®, CISM(Q), LSSBB, Founder of RGESIndia a highly talented technical leader with deep expertise in AI systems and real-world problem solving. Your insights pushed us to think beyond surface-level solutions and focus on scalable, impactful implementations. Shayak Mazumder, Founder of Adya thank you for clearly explaining how the adya.ai platform works, how agentic systems are structured, and how builders can leverage them to solve complex industry challenges. Your guidance gave us strong practical clarity on building and deploying agentic AI in real environments.
Once again, thank you to Internet and Mobile Association of India , BUILD India Digital Summit, adya, RGESIndia, and the entire India Digital Summit organizing team for hosting such a meaningful summit and hackathon. This experience significantly strengthened my technical skills, confidence, and understanding of production-grade agentic AI systems. Looking forward to building more, learning more, and creating real impact with intelligent systems 🚀🌟 #BuildAtIDS #IndiaDigitalSummit2026 #IAMAI #AdyaAI #RGESIndia #AgenticAI #AutonomousAgents #LLM #AIEngineering #AIDevelopment #Hackathon #HackathonExperience #Innovation #TechInnovation #ArtificialIntelligence #MachineLearning #DeepLearning #StartupEcosystem #TechCommunity #WomenInTech #WomenInAI #AIBuilders #FutureOfAI #LearningByBuilding #SkillDevelopment #CareerGrowth #Grateful #Community #TechEvents

Post Message: Happy to share that I emerged as the Winner of BUILD@IDS, conducted as an ancillary event at the 20th India Digital Summit (IDS 2026), organized by the Internet and Mobile Association of India (IAMAI).
I worked on the IAMAI problem track, which involved designing and building a foundational technology platform integrating structured learning with high-integrity certification exams. The selection process began with online submissions, followed by a national shortlist of finalists invited to present at IDS in Bengaluru, where my solution was selected as the winning entry for the problem statement.
Being part of the summit was an amazing learning experience. I got to connect with professionals across the industry and explore startups and AI-driven enterprise solutions, which really expanded my perspective on current software trends and products. I'm incredibly grateful for the opportunity to interact with Satyendra Verma, Shayak Mazumder, and Prasad Anumula PMP®, CISM(Q), LSSBB. Conversations with them and learning from their industry experience added significant value to this journey. Through this hackathon, I was also introduced to the Adya platform, and I'm excited to explore building and deploying solutions using it.
A sincere thank you to IAMAI, the organizers, volunteers, and everyone involved in making this event such a smooth and impactful experience. Grateful to the GNITS-CSE Department for constantly encouraging participation in opportunities like this. Very thankful to my family as well, especially for the last-minute travel support and encouragement that made this experience possible. Looking forward to further developing this platform in collaboration with the Internet and Mobile Association of India!

Post Message: 🚀 Built a Privacy-First Student Mental Wellness Web Application with Adya Launch Lab I designed and developed a complete Student Mental Wellness Check-in application during my hands-on build experience with the Adya AI platform. The goal was simple but meaningful — create a safe, calming digital space where students can regularly track their emotions, reflect on their thoughts, and build healthier mental habits. Instead of just building another dashboard, I focused on crafting a beautiful, supportive, and interactive experience. 💡 Key Features • Daily mood & stress check-ins • Emotion tracking with visual analytics (charts + trends) • Personal journal with local storage • Gamified "Wellness Garden" that grows with streaks 🌱 • Breathing exercises & self-care tips • Rule-based AI chat companion for gentle support • Fully frontend + privacy-first (no data leaves the device)
🧠 My Learning Journey with Adya: Working on Adya AI was a great hands-on experience where I:

- Rapidly prototyped full-stack-like apps
- Learned real-world debugging & build workflows
- Optimized features to run efficiently with minimal cloud usage

- Practiced transforming ideas -> UI -> working product
- Explored deployment concepts using Google Cloud It felt less like a tutorial and more like building an actual product from scratch. Grateful for the mentorship, tools, and platform support that made this learning-by-building experience possible.

A big thanks to Shayak Mazumder sir and the Adya team for providing mentorship, platform access and an industry-aligned environment to build this project.
Excited to keep creating meaningful AI-driven applications that solve real-world problems!

Post Message: Today’s session was more than a hands-on lab — it reshaped how I think about building with AI. 🚀 Exploring the Adya ecosystem, particularly App Studio and Agent Studio, highlighted a crucial shift: AI is no longer about experimenting with isolated tools or predefined use cases, but about designing and delivering usable, real-world applications. Working on the platform allowed me to move beyond surface-level implementation and focus on problem identification, execution, and iteration. Through this experience, I was able to: 🔹 Understand how AI agents can be orchestrated to solve practical problems 🔹 Move from shared use cases to independent application building 🔹 Prioritize what to build over how to set up infrastructure 🔹 Focus on execution and clarity rather than experimentation alone What stood out most was the product-oriented mindset encouraged throughout the session: 🔹 Build quickly without being constrained by infrastructure 🔹 Think in terms of solutions, not just prototypes 🔹 Iterate continuously based on learning and validation 🔹 Aim to create applications that are usable and deployable, not just academic The guidance from college ambassadors and the ongoing support during the lab made the learning process structured and impactful 🤝 This experience reinforced an important takeaway: 👉 AI value is created not by consumption, but by building, testing, and refining real use cases.Looking forward to applying these learnings and continuing to build with AI 🚀 #Adyalaunchlab #Buildathon #Adya #AdyaAi #AI #AIAgents #AppStudio #AgentStudio #TechWorkshop #Innovation #StudentDevelopers #AIProjects #LearningByBuilding #FutureOfAI Shayak Mazumder Adya @kamal @balaji @saravanamuthu

Post Message: Spent an inspiring day at Karpagam College of Engineering as part of the Adya LaunchLab Fellowship 2026 🚀
What impressed me most was how naturally the students gravitated toward building-first thinking. Instead of stopping at concepts, they jumped straight into designing, testing, and improving AI-driven solutions—questioning assumptions and experimenting with real system behavior along the way.
The session turned into an active workspace rather than a workshop. Students explored how modern AI systems are put together, how models interact with data in live environments, and how agent-based approaches can be applied to solve practical problems. Watching them iterate in real time made the experience incredibly rewarding.
Guidance from our CEO & CTO Shayak Mazumder of Adya added a strong systems perspective to the day, pushing conversations toward architecture trade-offs, deployment realities, and the challenges engineers face outside controlled demos.
Working alongside the team and mentoring students as they shaped their ideas using Vanij was a highlight for me. It's exciting to see such clarity and confidence emerging so early in their technical journey.
Huge appreciation to Karpagam College of Engineering for the support and coordination.
Eager to see how these ideas evolve as students continue building 🚀

Post Message: Today I have built WeatherWise, a modern and responsive Weather Forecast Application using React, entirely on the Adya platform. The experience pushed me to think beyond "just making it work" and focus on clean UI, smooth UX, and real-world usability.

- Key highlights of WeatherWise:
- Real-time weather search by city
- Hourly weather forecast with intuitive visuals
- 5-day forecast for better planning
- Clean, modern UI with a professional gradient-based design
- Built using React with a component-driven architecture

This project reinforced an important lesson for me: AI-powered platforms aren't just about speed, they're about clarity, execution, and building systems that feel complete. Grateful for the learning experience and the opportunity to build using the Adya ecosystem.
Now moving forward to iterate, improve, and build even more impactful applications 🚀

Name: Preetha Murugesan
Post URL:
https://www.linkedin.com/feed/update/urn:li:activity:7423236468329902080/?actorCompanyId=91107261
Post Message: On 27.01.26, I attended an ADYA session that really resonated with how I've always liked to approach AI.
I've consistently believed AI projects should go beyond technical success and actually help real people in meaningful ways. That session reinforced this mindset - AI isn't just about what models can do, but about what people still want to understand.
Doctors do explain medical reports, and they do it well. But people are naturally curious. After an appointment, many still wonder: What does this value really mean for my body? What could happen in the future if this continues? What small changes can I start making today? That's where I saw space for AI to support, not replace, medical professionals.
With this approach, I built ReportWise – an AI-powered Medical Report Explainer.
The goal wasn't just to read reports. It was to make them easier to live with and learn from.
ReportWise: – extracts lab test data from uploaded PDFs and report images – identifies whether values are normal or need attention using calm visual indicators – explains each test in simple, everyday language – describes possible general effects if certain levels remain abnormal – suggests practical lifestyle and wellness habits people can follow – presents everything in a structured dashboard so users see insights, not just numbers
This project reminded me that AI is powerful not just because it can analyze data, but because it can patiently answer the extra questions people carry after the doctor's visit.
The Adya session didn't change what I believe about AI — it strengthened it. It pushed me to think more like a product builder and focus on clarity, usefulness, and trust.
Still refining, still learning — but always building toward AI that helps people understand more, not feel more confused.
Grateful to the Adya team, and Shayak Mazumder for encouraging builders to

Post URL:
https://www.linkedin.com/feed/update/urn:li:activity:7423168151581827072/?actorCompanyId=91107261
Post Message: Had a fantastic time conducting the Adya LaunchLab Buildathon at Karpagam College of Engineering It was truly refreshing to see how curious and technically driven the students were. Throughout the session, they asked thoughtful questions and actively explored advanced topics like:

- LLM fine-tuning
- SLMs
- Production-grade RAG systems
- Agentic workflows and real-world AI deployments

What stood out most was their eagerness to go beyond theory—many teams actually started building and experimenting on these concepts, which is exactly the mindset we aim to encourage through Vanij.
Seeing students dive into production-level AI thinking at this stage of their journey was incredibly motivating. It reinforces our belief that when given the right tools, guidance, and freedom to experiment, students can achieve far more than we often expect.
Our CEO&CTO Shayak Mazumder shared deeply insightful perspectives on AI systems, architecture, and real-world challenges—sparking meaningful discussions that pushed students to think critically about the future of AI beyond just models and frameworks.
A big thank you to Karpagam College of Engineering for the warm hospitality and excellent coordination.
Looking forward to many more such sessions empowering future builders 🙌 #Adya #AdyaLaunchLab #Vanij #Buildathon #LLM #RAG #AgenticAI #StudentDevelopers #AIEngineering #FutureBuilders #KarpagamCollege

Post Message: Built ReceiptMind - A Smart Expense Tracker from Receipts using Vanij platform by Adya at the Adya Launch Lab. In just a few minutes, I was able to design and deploy a full-stack AI web app where users can upload a receipt image and the system automatically extracts the store name, date, items, and total amount using OCR + AI, categorizes the expense, and visualizes spending through an interactive analytics dashboard. What truly stood out was how Adya's agentic platform made it possible to connect AI, workflow logic, UI, and data seamlessly without heavy backend coding. From idea to a working product, the experience was fast, intuitive, and incredibly builder-friendly. Grateful for the guidance and inspiration from Shayak Mazumder sir and the entire Adya team for creating such a powerful ecosystem for builders. This experience showed me how AI agents and low-code platforms can accelerate real-world product development. #AdyaLaunchLab #AdyaAI

Post Message: Built an AI-driven IPO Intelligence Platform in record time — powered by Adya 🚀
What began as a simple idea evolved into a fully functional IPO Intelligence dashboard, covering insights, trends, and visualizations — with Adya enabling rapid execution.
Instead of spending weeks wiring UI, logic, and workflows, I focused on high-impact outcomes: 📊 IPO trend analysis 📈 Market insights 🤖 AI-assisted intelligence ⚡ Clear, decision-ready data
Adya didn't just accelerate development — it enabled better product thinking, cleaner design decisions, and faster iteration. This experience reshaped how I approach product development: ✔️ Less boilerplate, more thinking ✔️ Less setup, more strategy ✔️ Less time coding, more time creating
If this is what AI-assisted building looks like today, the future of development is already here. Built using Adya 🚀 Excited to continue building smarter, insight-driven applications.
Adya Shayak Mazumder Kamal Balaji SARAVANAMUTHU S

Post Message: I recently worked on a full-stack notes sharing platform for students in Adya, designed to solve a persistent academic problem: fragmented study materials, lack of organization, and inefficient peer-to-peer sharing. 🔹 Student Notes Sharing Platform (EdTech Use Case) The platform enables students to upload, manage, and access study notes in a centralized system, organized by subject and contributor. I designed and implemented the system as a fully functional web application with both frontend and backend components. Key capabilities of the platform include: Secure note uploads with metadata (title, subject, contributor) Backend-powered storage and retrieval of notes Subject-wise browsing and filtering for faster access Download functionality for shared resources A structured upload workflow with validation and persistence From a system perspective, the project covers: Frontend UI built for clarity and usability Backend APIs to handle note management Database integration for structured storage Separation of concerns between presentation, logic, and data The platform reduces dependency on scattered messaging apps and cloud links, providing a single source of truth for academic notes. 💡 This project reflects my interest in building end-to-end systems, not just interfaces—focusing on real workflows, data flow, and scalability considerations in educational technology.
I thank Adya for providing a wonderful application that
saves a lot time

Post Message: I recently worked on two AI-driven problem statements that focus on solving high-impact challenges across banking and public healthcare. 🔹 AI Tractor Quotation Analyzer (Banking Use Case) The first solution addresses a real operational challenge for an HDFC Bank–style lending workflow, where tractor loan quotations arrive in highly unstructured formats (images, PDFs, handwritten scans). I designed a violet-themed AI interface that represents the problem statement, enabling automated extraction of critical fields such as: Tractor Model Horsepower (HP) Quotation Amount This system reduces manual verification, speeds up loan processing, and improves accuracy using AI-based document understanding. 🔹 AI Healthcare Prevention Agent using Satellite Data The second solution is an AI agent (chatbot) focused on healthcare prevention, powered by satellite data insights. The agent analyzes environmental and satellite-derived indicators to: Identify potential health risk patterns Support early prevention strategies Deliver actionable insights through a conversational interface This approach bridges remote sensing + AI + public health, aiming for proactive healthcare rather than reactive treatment. 💡 These projects reflect my interest in building AI systems that go beyond models — systems that solve real, scalable problems in finance and healthcare. I thank Adya for providing a wonderful application that saves a lot time #Adyalaunchlab

Post Message: Excited to share a project I recently built using Next.js + React, focused on solving a real student problem: Last-minute exam stress and poor study planning. 🧠 What this app does: ✅ Students enter exam dates & syllabus size ✅ Automatically generates a personalized daily study plan ✅ Tracks progress in real time ✅ Dynamically adjusts the schedule if tasks are missed or completed early ✅ Clean, responsive UI with light/dark mode ✅ Built within strict cloud cost limits ($5 GCP credits)

🌟 Experience with Adya AI Platform Building this project on the Adya Platform was a great experience. The platform provided an industry-aligned environment to rapidly prototype, debug, and validate AI-powered use cases with real constraints. Working with Adya gave me hands-on exposure to: -Designing cost-efficient AI workflows -Building reliable, production-ready prototypes -Understanding practical challenges in AI deployment
A big thanks to Shayak Mazumder sir (CEO, Adya) and the Adya team for creating a powerful ecosystem that encourages real-world AI innovation and learning by building.

Post Message: Today’s video gave a clear and practical understanding of how ADYA is enabling the next generation of AI application development. What impressed me about ADYA is how it goes beyond just building models. The platform focuses on agent-based architecture, real-world workflows, and smooth deployment — making AI development more structured, scalable, and production-ready. From Agent Studio to Multi-Agent Networks, ADYA simplifies how intelligent systems are designed and connected to applications. While working on my project AgriMate, an AI-powered agriculture platform, ADYA helped me understand: how multiple AI agents can collaborate to solve real-world problems, how AI can be integrated into full-stack applications, and how complex ideas can be transformed into working systems using a single platform. A heartfelt thank you to Shayak Mazumder sir for giving us the opportunity to explore and build on ADYA. Getting hands-on experience with such an advanced platform at this stage has greatly improved my confidence and understanding of applied AI. Grateful for the learning and excited to build more impactful solutions using Adya🙌🏻💻 #ADYA #ArtificialIntelligence #MultiAgentSystems #AgriTech #LearningByDoing #AIPlatforms #Innovation

Post Message: This wasn't just a buildathon — it fundamentally changed how I think about building AI systems. Through Adya launch lab, I got hands-on exposure to how modern AI products are designed beyond models — with a strong focus on systems thinking, pipelines, and real-world constraints that matter in production. The sessions went deep into: The evolution of LLMs and how to make practical fine-tuning vs. retrieval decisions Designing RAG pipelines and agent-based workflows that scale beyond demos Moving from prompt-level experimentation to deployable, auditable AI systems Using Adya's platform and Studio, I worked on a multi-agent AI system to address a real compliance challenge in fintech — where policy interpretation, logic generation, and monitoring were handled as coordinated agents, not isolated scripts. With access to GCP credits, the buildathon pushed us to actually build: implement pipelines, test assumptions, iterate fast, and think in terms of product readiness, not just proofs of concept. I'm also proud to be a Campus Ambassador for Adya Launch Lab, helping bring this builder-first, systems-thinking culture to campus — and encouraging students to move from learning -> building -> shipping. Grateful to Adya and Shayak Mazumder sir for creating an ecosystem that empowers students to think like AI engineers, not just model users. Onward to building better systems 🚀 #AdyaLaunchLab #AdyaAI #CampusAmbassador #AIEngineering #LLM #RAG #AIAgents #Buildathon #StudentBuilders #BuildersOfBharat

Post Message: Yesterday's session at Adya Launch Lab (Buildathon) was more than just an event. It was a space to explore, build, and rethink how ideas turn into real, working solutions. The hands-on exposure to the Adya AI ecosystem, combined with practical building, made the experience focused, engaging, and genuinely impactful. During the event, I worked on SereneMind, a student mental wellness check-in application designed to support emotional awareness in a simple, safe, and privacy-first way. The idea behind SereneMind is to help students reflect on how they are doing through gentle check-ins, mood tracking, and supportive insights without turning mental health into something clinical or overwhelming. The focus was on creating a system that feels human, encouraging, and actually usable in a student's daily life. Building SereneMind pushed me to think beyond features and focus on flow, purpose, and execution. From designing meaningful AI-driven interactions to ensuring responsible data handling, every part of the project was shaped with real users in mind. It was not about experimenting for the sake of it, but about creating something that could realistically grow into a helpful platform. This journey was made possible with the support of Adya AI, using tools such as Agent Studio, App Studio, and integrations with Google Cloud and Gemini APIs. These tools helped transform ideas into working components and allowed me to focus more on problem-solving rather than setup or infrastructure. A big thanks to the Adya team and mentors for creating an environment that truly encourages building, learning, and iteration. This is just the beginning for SereneMind. I'm excited to continue improving it, making it more refined, more thoughtful, and more impactful. Looking forward to building further, learning more, and shipping better solutions ahead 🚀

Post Message: Today wasn't just a session — it was a shift in how I think about building AI products. Exploring the Adya ecosystem and building AI Memory Guardian (a memory reminder and forgetfulness-prediction app) brought one thing into sharp focus:
AI isn't about demos anymore — it's about shipping usable systems. With Adya, I was able to move beyond boilerplate and focus on real problem-solving:
Designing multi-agent intelligence (memory observation, prediction, and nudge agents) Turning passive reminders into proactive, risk-based nudges Building an experience that thinks before the user forgets What stood out wasn't hype — it was the execution mindset: Build faster without getting stuck in infrastructure Think in products, not just prototypes
Launch -> validate -> iterate -> scale
Create solutions that are market-ready, not just assignment-ready The Launch Lab framework made one thing very clear:
If you're not deploying and testing real use cases, you're just consuming. Building AI Memory Guardian reshaped how I approach AI projects — less theory, more systems thinking, less "what model?", more "what problem?" and a strong focus on human-centric, deployable AI.
Grateful for the exposure, tooling, and clarity this journey provided. Special thanks to Shayak Mazumder and the Adya team for enabling builders to move from idea -> execution -> impact.
Now it's time to iterate, refine, and ship 🚀

Post Message: Yesterday, I built an Inventory Management System using React, developed entirely on the Adya platform. This experience encouraged me to move beyond simply implementing features and focus on real-world usability, clean workflows, and clear data representation. Adya enabled a smooth transition from concept to implementation to live preview, eliminating typical setup and tooling overhead and allowing me to concentrate on execution and problem-solving. Key highlights of the project: Real-time inventory tracking Intelligent stock monitoring for better decision-making Structured product and category management Clean, modern, and intuitive UI Built with React using a scalable, component-based architecture This project reinforced an important insight: AI-powered platforms are not just about speed they enable clarity, focus, and production-ready development. By minimizing friction around setup and configuration, I could focus on what truly matters: designing efficient workflows, improving user experience, and delivering a polished solution. Grateful for the opportunity to build and learn within the Adya ecosystem. Looking forward to iterating further and building impactful applications.

Post Message: I recently had the opportunity to participate in an insightful session at my college focused on Adya, and it was a game-changer!
The most fascinating part was diving into Multi-Agent Systems. Seeing how different AI agents collaborate to handle complex tasks—moving from a simple prompt to a full Project Requirements Document (PRD) and then to functional code—was amazing.
Using the platform, I worked on “Smart Syllabus,” an AI-powered educational platform designed to solve a major student pain point: academic overwhelm.
The project focuses on:
Automated Organization: Students upload a syllabus (PDF/Image), and the AI parses key deadlines and topics automatically.

Smart Study Plans: It generates a structured weekly schedule and syncs it directly with Google Calendar.
Interactive Learning: The “Study Hub” creates AI-generated flashcards and a chat-style “Quiz Mode” for active recall.
Progress Tracking: A clean, “Calm Tech” dashboard to visualize course completion and reduce anxiety.
What makes Adya stand out for me: =>Unified Workflow =>Multi-Agent Intelligence =>Speed to Solution
A huge thank you to Shayak Mazumder and the Adya team for giving us access and sharing such a clear, powerful vision of the future of AI-driven development. #Adya #SmartSyllabus #AI #MultiAgentSystems #EdTech #GenerativeAI #FutureOfCoding #ArtificialIntelligence

Post Message: This wasn't just a buildathon — it fundamentally changed how I think about building AI systems. Through Adya launch lab, I got hands-on exposure to how modern AI products are designed beyond models — with a strong focus on systems thinking, pipelines, and real-world constraints that matter in production. The sessions went deep into: The evolution of LLMs and how to make practical fine-tuning vs. retrieval decisions Designing RAG pipelines and agent-based workflows that scale beyond demos Moving from prompt-level experimentation to deployable, auditable AI systems Using Adya's platform and Studio, I worked on a multi-agent AI system to address a real compliance challenge in fintech — where policy interpretation, logic generation, and monitoring were handled as coordinated agents, not isolated scripts. With access to GCP credits, the buildathon pushed us to actually build: implement pipelines, test assumptions, iterate fast, and think in terms of product readiness, not just proofs of concept. I'm also proud to be a Campus Ambassador for Adya Launch Lab, helping bring this builder-first, systems-thinking culture to campus — and encouraging students to move from learning -> building -> shipping. Grateful to Adya and Shayak Mazumder sir for creating an ecosystem that empowers students to think like AI engineers, not just model users. Onward to building better systems 🚀 #AdyaLaunchLab #AdyaAI #CampusAmbassador #AIEngineering #LLM #RAG #AIAgents #Buildathon #StudentBuilders #BuildersOfBharat

Post Message: Today wasn't just informative — it changed the way I approach building AI solutions. Working through an AI ecosystem and developing a practical application made one thing very clear: AI has moved past demos — real value comes from deployable systems. This experience helped me step away from boilerplate code and focus on meaningful problem-solving: • Architecting intelligent systems that combine observation, prediction, and action • Shifting from basic reminders to proactive, risk-aware interventions • Designing solutions that act before users run into problems • Building with real-world usage in mind What truly stood out was the build-first mindset, not the hype: ✔️ Move quickly without being blocked by infrastructure ✔️ Treat projects like products, not experiments ✔️ Release early, test often, and improve continuously ✔️ Aim for real adoption, not just submission This journey reshaped my thinking: Less focus on models More focus on problems Greater emphasis on scalable, human-centered AI. Grateful for the guidance, tools, and clarity gained along the way. Now it's time to refine, improve, and ship 🚀 #AI #ProductEngineering #SystemDesign #TechLearning #Innovation #BuildToShip #Adyalaunchlab

Post Message: A Day of Building, Learning, and Product Thinking at #AdyaLaunchLab
🔹 Professional & Clean 🚀 Built a Project Management Application focused on improving task tracking, collaboration, and productivity. This project helps teams plan, track, and manage projects efficiently by providing clear visibility into project status, progress, and deadlines—all in one place. Hands-on experience with: • Project workflow design & task lifecycle management • Dashboard UI for progress tracking and analytics • User-centric design & productivity-focused features • Low/No-code & modern web tools for rapid development
Excited to keep building smarter and safer systems! 🔐💻
A big thank you to Shayak Mazumder, @kamal, @balaji, SARAVANAMUTHU S and the Adya team for the mentorship, clarity, and opportunity to learn in such a practical environment.
Excited to keep building and improving with these insights 🚀

Post Message: 🚀 Built my first AI-powered app! Today wasn't just about building an app — it was about understanding how real online learning platforms are engineered, not just designed.
While working on my Online Learning Platform project, I moved beyond basic UI screens and focused on creating a functional, learner-centric system that feels practical, scalable, and real-world ready. This experience made one thing very clear:
Great learning platforms aren't just built — they're engineered with purpose and user impact in mind.
What stood out during this build: Structuring a clean, intuitive UI for learners and content flow Designing pages with real student journeys in mind Understanding how features connect across the platform Focusing on usability, clarity, and simplicity Treating the project like a real product, not just an academic task This journey reinforced an important mindset shift: Build to solve real problems, not just to complete tasks Think from the learner's perspective Iterate, improve, and refine continuously Grateful for the exposure, tools, and learning environment that encouraged hands-on problem solving and product thinking.
Looking forward to learning more, improving my skills, and building better systems step by step 🚀

Post Message: Today at Adya Launch Lab 2025, I had an incredible learning experience! 🚀

The One-Day Buildathon showed me that building a platform is more than coding— it's about creating meaningful impact that users can trust and engage with.

With Idea Pulse, the focus was on transforming ideas into actionable, user-friendly solutions.

Highlights from the day:

- Designing flows that are intuitive, smooth, and user-centric.
- Developing features that solve real problems, not just look good.
- Iterating, testing, and refining with real-world usability in mind.
- Treating the project as a deployable, impact-ready product.

Biggest takeaway: Platforms, AI, or apps deliver value only when they anticipate user needs, reduce friction, and empower users.

A huge thank you to the Shayak Mazumder and Adya team for organizing this experience and guiding us to explore, build, and learn. Grateful for the opportunity to collaborate, iterate, and create solutions that truly make a difference! 🌟 #AdyaBuildathon #Innovation #ProductThinking #UserExperience #AdyaLaunchLab #Buildathon

Post Message: This wasn't just about building an AI project — it was about rethinking how GenAI can solve real operational problems in banking. Working on a GenAI-powered Tractor Invoice Processing system made one thing very clear: 👉 AI isn't about extracting text — it's about understanding messy real-world data and turning it into trusted decisions. In this project, I moved beyond simple OCR and focused on end-to-end problem solving: • Designing an OCR + GenAI pipeline for unstructured, handwritten dealer quotations • Extracting critical fields like Tractor Model, Horsepower, and Quotation Amount from inconsistent formats • Adding validation logic to catch mismatches, missing data, and risky inputs • Building confidence scoring and human-in-the-loop checks for underwriting safety What stood out wasn't just the tech — it was the execution mindset: Build for real bank workflows, not clean datasets Handle errors, ambiguity, and edge cases Think like a product, not just a model Automate -> validate -> review -> approve This project reinforced a simple truth: If your AI can't handle real-world messiness, it's not production-ready. Building this gave me a stronger understanding of how GenAI can support faster, safer loan approvals by reducing manual effort while maintaining trust and compliance. Adya Shayak Mazumder #GenAI #AIInBanking #OCR #MachineLearning #ProductThinking #BuildInPublic #StudentDeveloper #Adyalaunchlab #Buildathon

Post Message: Excited to unveil my new project: A multi-agent Student Expense & Budget Manager. I built a comprehensive web application to simplify financial management for students. The "Student Expense Manager" is a React-based platform that automates everything from splitting bills to monitoring group budgets. The application's backend is designed with a

multi-agent architecture, where specialized agents handle distinct tasks: Expense Agent: Manages all CRUD operations for expenses. Split Calculation Agent: Computes fair and custom splits among participants. Budget Monitoring Agent: Tracks spending against set limits and sends alerts. Settlement Agent: Calculates the most efficient way for users to settle debts. This project was a fantastic challenge, allowing me to combine front-end development in React with complex backend logic. I'm proud of the result—a clean, functional, and user-friendly financial tool. Adya #Adyalaunchlab #Buildathon and thanks for Shayak Mazumder, SARAVANAMUTHU S

Post Message: 🚀 From Experiments to Real Products

Some days don't just teach you how to build — they change how you think about building.

Working inside the Adya LaunchLab ecosystem was one of those moments for me.

Instead of building isolated features or demo flows, the focus shifted to shipping a real buyer-facing product — an app that allows users to browse, order, and manage products under real-world constraints like usability, flow clarity, and scalability.

While building a Buyer App for product ordering, a few things became clear:

🔷 Great products prioritize user flow, not just features 🔷 Ordering isn't about clicks — it's about reducing friction 🔷 Real value comes from clear UX, reliable logic, and fast iteration 🔷 Shipping > demoing. Every time.

Adya removed much of the setup friction and allowed me to focus on what truly matters: problem framing, system flow, UX decisions, and iterative improvement.

This experience reinforced my bias toward: build -> test -> learn -> refine -> ship

Huge thanks to Shayak Mazumder, Kamal, Balaji, SARAVANAMUTHU S, and the entire Adya team for creating an environment that pushes builders toward execution, not just ideas.

Excited to keep applying these learnings and building products that users actually rely on. 🚀

Post Message: Today was more than just working on a project— it changed how I think about designing intelligent systems. 💡

Working on a Subscription Box Service flow using Adya helped me move beyond static workflows and focus on creating a complete, user-ready experience. Instead of thinking only about features, I learned to design flows that understand user intent, adapt to preferences, and guide decisions naturally.

Using an agent-based approach, I built a journey that covers discovery, personalized recommendations, subscription confirmation, and post-subscription support. The real learning came from structuring the flow to reduce friction, introduce flexibility, and keep the user in control at every step. It reinforced the idea that good systems don't just respond — they anticipate.

What stood out most was the emphasis on execution over theory: building something usable, scalable, and aligned with real-world scenarios. This experience strengthened my understanding of UX thinking, automation, and how agents can power meaningful digital experiences. Grateful for the opportunity to explore, build, iterate, and learn with Adya. Looking forward to creating more impact-driven solutions. #Adya #AgentFlow #UXDesign #AIProjects #LearningByBuilding #adya #buildathon Adya Shayak Mazumder

Post Message: 🌟 A Day of Building, Learning, and Product Thinking at #AdyaLaunchLab

Building inside the Adya ecosystem made one thing very clear: most AI projects fail not because of weak models, but because they're not designed as systems.

While working on an AI-driven product, the focus quickly shifted away from isolated experiments and toward understanding how AI behaves once real users are involved. Instead of treating intelligence as a single prediction, the work centered on building workflows that observe behavior, reason over context, and act in ways that are actually useful.

What stood out during this process:

✅Replacing simple reminders with context-aware interventions driven by user behavior.
✅Designing agent-based workflows that connect observation, prediction, and action.
✅Prioritizing the reason behind user behavior rather than reacting to surface-level signals.
✅Building with feedback loops so the system improves after deployment, not before it.

This hackathon reinforced a key lesson: Great AI solutions are executed with clarity, collaboration, and intent.

A big thank you to Shayak Mazumder,Adya,@kamal,@balaji, SARAVANAMUTHU S and the Adya team for the mentorship, clarity, and opportunity to learn in such a practical environment.

Excited to keep building and improving with these insights 🚀 #Buildathon #AdyaLaunchLab #AIHackathon #ProductThinking #MultiAgentAI #HandsOnLearning #AdyaAI #Innovation

Post Message: Today wasn't just a session — it was a shift in how I think about building AI products.

Exploring the Adya ecosystem and building AI Memory Guardian, a memory reminder and forgetfulness-prediction app, brought one thing into sharp focus:

AI isn't about demos anymore — it's about shipping usable systems. With Adya, I was able to move beyond boilerplate and focus on real problem-solving:

Designing multi-agent intelligence (memory observation + prediction & nudge agents)

Turning passive reminders into proactive, risk-based nudges Building an experience that thinks before the user forgets What stood out wasn't hype — it was the execution mindset:

Build faster without getting stuck in infrastructure Think in products, not just prototypes

Launch -> validate -> iterate -> scale

Create solutions that are market-ready, not just assignment-ready The Launch Lab framework made one thing very clear:

If you're not deploying and testing real use cases, you're just consuming. Building AI Memory Guardian reshaped how I approach AI projects — less theory, more systems thinking, less "what model?", more "what problem?", and a strong focus on human-centric, deployable AI.

Grateful for the exposure, tooling, and clarity this journey provided. Special thanks to Shayak Mazumder and the Adya team for enabling builders to move from idea -> execution -> impact.

Now it's time to iterate, refine, and ship 🚀

Adya Shayak Mazumder

Post Message: Truly enjoyed being part of the Adya Hackathon — an incredible hands-on learning experience that reshaped how I think about building with AI! During the event, I built an AI agent powered by Gemini on Google Cloud, designing an end-to-end workflow from user chat input to intelligent, contextual responses 🤖✨ This wasn’t just about creating a prototype — it was about understanding how real AI systems are structured, deployed, and iterated.

Through this journey, I learned to: • Design agent-driven AI workflows • Work practically with cloud + generative AI • Move from idea -> execution under real hackathon pressure • Think beyond demos and focus on building usable systems

Grateful to Adya for hosting such a well-organized and impactful experience. Special thanks to Shayak Mazumder, @saravanamuthu, @kamal, and @balaji for the continuous guidance, encouragement, and inspiration throughout the journey 🚀

Excited to keep exploring, creating, and growing in the AI space — blending UI/UX with AI systems to build meaningful products 🌟 #Hackathon #Buildathon #Adya #AdyaLaunchLab #AIJourney #Gemini #GoogleCloud #GenerativeAI #LearningByDoing #AIAgents #CareerGrowth

Post Message: A Day of Building, Learning, and Product-First Thinking at #AdyaLaunchLab

The Adya Hackathon was a powerful reminder that meaningful AI is created through clear execution, intentional design, and solving real problems — not just smart prompts or interesting concepts. This experience pushed me to move past viewing AI as a classroom exercise and start approaching it as a real-world, deployable product. Key learnings: ● Understanding how multi-agent systems work together to address practical challenges ● The importance of iterative, hands-on development ● Moving from "interesting technology" to true user value and impact This hackathon reinforced an important takeaway: 👉 Strong AI solutions come from focus, collaboration, and purposeful execution. A huge thanks to Shayak Mazumder, @Kamal, @Balaji, SARAVANAMUTHU S , and the Adya team for the guidance, insights, and opportunity

to learn in such a hands-on and supportive environment. Looking forward to continuing to build, refine, and apply these learnings.

Post Message: Grateful for an insightful learning experience exploring the Adya platform and its end-to-end AI ecosystem. The session provided a strong understanding of how Adya approaches AI product development through its integrated studios: 🔹 Agent Studio — Designing and orchestrating intelligent agents and workflows 🔹 App Studio — Rapidly building full-stack web applications on top of AI agents with minimal frontend or integration effort 🔹 Model Studio — Adapting and fine-tuning models for specific business use cases 🔹 Cloud Studio — Deployment, scaling, and production management As a beginner on the platform, the availability of pre-built agents and templates made it easier to understand real-world AI workflows. Using App Studio, it was impressive to see how quickly AI logic can be transformed into a functional web application. During the hands-on session, I built a simple AI agent that accepts an email as input, processes it using Gemini, and generates a concise summary along with suggested replies — a practical use case that demonstrated how ideas can move efficiently from concept to implementation. Overall, the experience reinforced the importance of an execution-driven mindset: building real systems, validating practical use cases, and delivering deployable, human-centric AI solutions rather than just theoretical prototypes. Grateful for the learning and clarity this session provided. Looking forward to building, improving, and exploring further.

Post Message: Today’s work went beyond building an AI system — it fundamentally reshaped my perspective on how artificial intelligence should be applied to real-world problem solving. While developing an AI Startup Pitch Improver, I realized the goal is not simply to refine pitch content for presentation purposes. The true value lies in enabling founders to communicate their ideas with clarity, strategic structure, and market awareness, helping them translate vision into compelling, investor-ready narratives. The focus evolved from asking “Can AI improve a pitch?” to “How can AI deliver reliable, explainable, and actionable guidance that founders can confidently use?” This shift emphasized the importance of trust, interpretability, and real usability in AI-driven solutions. What stood out most was not the algorithms themselves, but the execution mindset. The experience reinforced the importance of thinking in terms of products rather than isolated models, using AI to augment human decision-making, and building systems that prioritize transparency and user value. This experience reinforced the importance of treating AI as a product enabler rather than a standalone model — prioritizing usability, transparency, and real-world applicability. It highlighted a key lesson: AI delivers value only when it solves real problems in a way people can trust and use. Now, the focus is on refining, validating, and scaling this solution toward real impact. 🚀 Adya Shayak Mazumder @Kamal @Balaji @Saravanamuthu

Post Message: Today wasn't just about building a project — it changed how I think about building AI systems. As part of Adya Launch Lab, I built a Resume Feedback Agent — an agentic AI system that analyzes resumes, identifies mistakes, detects missing skills, and suggests clear improvements. What stood out to me was this shift in mindset: AI isn't about just prompts or demos anymore — it's about designing usable, deployable systems. Through this project, I learned to: Think in terms of agents, not single responses Break problems into analysis, reasoning, and action Focus on real user value, not just features Move from idea -> flow -> execution The Resume Feedback Agent parses resumes, reasons over skill gaps and clarity, and autonomously generates structured feedback — closer to how real AI products work in the industry. Grateful for the clarity, tooling, and execution-first approach that Adya encourages. Now it's time to iterate, refine, and ship 🚀 #AdyaAI #AgenticAI #LaunchLab #AIProjects #Placements #StudentBuilder #ResumeAI #Adyalaunchlab

Post Message: Had a valuable learning experience exploring the Adya platform and gaining exposure to its end-to-end AI ecosystem.

The session provided a clear understanding of how Adya approaches AI product development through its integrated studios: Agent Studio — for designing and orchestrating intelligent agents and workflows

App Studio — for rapidly building complete web applications on top of AI agents without heavy frontend or integration overhead

Model Studio — for adapting and fine-tuning models for specific business use cases

Cloud Studio — for deployment, scaling, and production management As a beginner exploring the platform, I found the availability of pre-built agents and templates extremely helpful in understanding real-world AI workflows. Using App Studio, it was insightful to see how quickly AI logic can be transformed into a functional web application.

During the hands-on session, I built a simple AI agent that takes an email as input, processes it using Gemini, and generates a concise summary along with suggested replies — a practical use case that highlighted the platform's ability to move ideas swiftly from concept to implementation.

Overall, the experience reinforced the importance of an execution-focused approach: building real systems, testing practical use cases, and delivering deployable, human-centric AI solutions rather than just prototypes.

Grateful for the learning and clarity this session provided. Looking forward to iterating, improving, and building further.

Post Message: This experience wasn't about learning a new tool — it was about learning a new way to build. Using Adya made one thing very clear: AI works best when it guides thinking, not when it replaces it. Instead of focusing on features, the platform pushed me to focus on process and clarity: • Turning vague ideas into structured systems • Designing workflows before writing anything • Moving from idea to execution without unnecessary friction • Making decisions based on how real users would interact with the system What truly stood out was the builder's mindset Adya promotes: Speed with purpose Simplicity over complexity Continuous building, testing, and refining The learning approach mattered just as much as the platform itself — emphasizing

how to think, not just what to create. With a strong focus on system thinking, real-world relevance, and execution confidence, the experience felt practical, not theoretical. One takeaway stayed with me: If a platform helps you think clearly while building, it doesn't just help you create — it helps you grow. #Adyalaunchlab #Buildathon Adya Shayak Mazumder @kamal @balaji @saravanamuthu

The session gave a clear view of how Adya structures AI product development through its different studios: Agent Studio 🤖 for designing and orchestrating AI agents and workflows. App Studio 🛠️ for building complete web applications on top of these agents, without getting stuck in frontend or integration complexity. Model Studio 🧠 for fine-tuning and adapting models to specific use cases. Cloud Studio ☁️ for deployment, scaling, and managing applications in production.

In the hands-on session, I explored the platform as a beginner and found the availability of pre-built agents and templates extremely helpful. Using App Studio, it became clear how quickly AI logic can be converted into a usable web application.

I built a simple agent that takes an email as input, processes it through Gemini, and returns a concise summary along with suggested replies ✉️—a small but practical use case that showed how fast ideas can move from concept to working application.

Overall, the experience emphasized a strong execution mindset: build real systems, test real use cases, and focus on deployable, human-centric AI rather than just demos. Grateful for the exposure and clarity this session provided. Time to iterate, refine, and ship 🚀.

Post Message: Today wasn't just another AI session — it genuinely changed how I think about building products. I spent the day exploring the Adya platform and working hands-on to build an

AI Placement Readiness Agent — an agent that helps students understand where they stand for placements, identify skill gaps, and get a clear preparation direction. The biggest shift for me wasn't about tools or models. It was this mindset: AI is no longer about demos. It's about building systems that actually work end-to-end. The session reinforced something very important: If you're not deploying and testing real use cases, you're just consuming AI — not building with it. Grateful for the learning, clarity, and hands-on exposure. Now it's time to iterate, improve, and ship #Adyalaunchlab #Buildathon Adya Shayak Mazumder @kamal @balaji @saravanamuthu

Post Message: This wasn't just about building an AI project — it was about rethinking how GenAI can solve real operational problems in banking.

Working on a GenAI-powered Tractor Invoice Processing system made one thing very clear:

👉 AI isn't about extracting text — it's about understanding messy real-world data and turning it into trusted decisions.

In this project, I moved beyond simple OCR and focused on end-to-end problem solving:

• Designing an OCR + GenAI pipeline for unstructured, handwritten dealer quotations

• Extracting critical fields like Tractor Model, Horsepower, and Quotation Amount from inconsistent formats

• Adding validation logic to catch mismatches, missing data, and risky inputs

• Building confidence scoring and human-in-the-loop checks for underwriting safety

What stood out wasn't just the tech — it was the execution mindset:

Build for real bank workflows, not clean datasets

Handle errors, ambiguity, and edge cases

Think like a product, not just a model

Automate -> validate -> review -> approve

This project reinforced a simple truth:

If your AI can't handle real-world messiness, it's not production-ready.

Building this gave me a stronger understanding of how GenAI can support faster, safer loan approvals by reducing manual effort while maintaining trust and compliance. Adya

Post Message: Built an AI-Powered Agriculture Management System

Recently worked on developing a full-stack AI-powered agriculture management application focused on practical, real-world use cases. The system helps farmers make data-driven decisions by analyzing inputs such as soil type, location, season, crop history, and market trends.

The application provides intelligent crop recommendations, yield predictions, irrigation and fertilizer guidance, and market insights to support better planning and profitability. AI is integrated to deliver explainable recommendations while keeping usability simple and farmer-friendly.

This project strengthened my understanding of full-stack development, AI integration, and building scalable solutions with real social impact. It also highlighted the importance of designing responsible and accessible AI systems for real users.

Always open to feedback and learning more about agri-tech and applied AI 🚀

Post Message: Today wasn't just about building a model — it changed how I think about solving real-world problems with AI. Working on a Car Valuation system, I realized this isn't about predicting numbers for a demo — it's about delivering trustworthy, usable insights that actually help users make decisions. The focus shifted from "Can we predict the price?" to "How do we make this prediction reliable, explainable, and market-ready?" What I worked on: Building a data-driven car price prediction model using real-world features Handling noisy, incomplete, and biased data — because real data is never clean Turning raw predictions into user-friendly valuation insights Designing the system to scale beyond a prototype What stood out most wasn't the algorithms — it was the execution mindset: Think in products, not just models Validate assumptions with real data Iterate fast, improve continuously Build solutions that people can actually use This project reinforced one key lesson: If you're not testing your model in real scenarios, you're just experimenting — not building. Now it's time to refine, validate, and ship 🚀 Adya Shayak Mazumder @kamal @balaji @saravanamuthu #adyaAi #Shayak Mazumder #AI #MachineLearning #CarValuation #DataScience #ProductThinking #BuildInPublic #LearningByDoing

Artificial Intelligence is no longer a future concept — it's the force reshaping technology, industries, and careers right now.

The AI Tech Talk @ THIRAN 2026 brings together leaders who are not just talking about AI, but building, deploying, and scaling intelligent systems across global platforms.

🎙️ Meet Our Esteemed Speakers

🗣️ Shayak Mazumder CEO & CTO — Adya.AI

🗣️ Sudarsun Santhiappan, PhD Chief AI Scientist — BUDDI AI

🗣️ Anindya Moitra Director — PayPal

⚡ What You'll Take Away ✔️ Understanding agentic & autonomous AI systems ✔️ How multi-agent intelligence is powering next-gen innovation ✔️ Turning AI research into real-world,

production-ready solutions ✔️ Enterprise & healthcare AI use cases from the field ✔️ How AI is transforming careers, startups, and future roles

🚀 This is not a theoretical session. This is AI as it's built, scaled, and used in the real world.

📅 THIRAN 2026 🔗 Registration Open: https://thiran.sece.ac.in

Be ready to learn from those shaping the AI revolution. Follow @srieshwar_thiran — the countdown begins! 💥

Post Message: 🌟 TECH TALK: THIRAN 2026 SPOTLIGHT EVENT 🌟

Presenting our Tech Talk Speaker: 🔥 Mr.Shayak Mazumder – CEO & CTO, Adya.AI 🔥

Apart from being an AI pioneer, Mr.Shayak is rewriting how intelligence works. He leads the creation of one of the world's most advanced agentic-AI platforms, enabling autonomous decision-making, multi-agent collaboration, and enterprise-scale intelligence trusted by Fortune 500s, governments, and global tech powerhouses.

As a spotlight speaker for the Tech Talk event at THIRAN 2026, Mr.Shayak is going to flip your perspectives, fire up your creativity, and demonstrate to you what the next decade of AI will look like.

💡 Your AI Takeaways: ⚡ How autonomous agents are transforming real-world industries ⚡ Multi-agent intelligence: the tech behind next-gen innovation ⚡ How AI is reshaping jobs, careers & startups

This is your moment to learn from an AI Expert who is engineering tomorrow's intelligence.

Post Message: 🚀 Big Opportunity for Startups!

BUILD@IDS is a national-level, industry-driven Buildathon by IAMAI (Internet and Mobile Association of India) conducted as part of the 20th India Digital Summit (IDS 2026) in Bengaluru — one of India's biggest tech & policy platforms.

👉 All interested startups are strongly encouraged to register. Link in the first comment

📩 Once registered, please share your acknowledgement/confirmation with us.

Unlike typical hackathons, BUILD@IDS focuses on solving practical business and technology challenges sourced directly from corporates.

We have invited companies across varied sectors to submit the complex problems they are currently navigating.

How It Works

You will work on finalised problem statements with clear business contexts and expected outcomes.

❇️ Shortlisted teams will have 2 days to design, build, and test working prototypes or proof-of-concept models.

❇️ Finalists will present live demos of their solutions during the India Digital Summit in Bengaluru on January 29, 2026.

Why Participate?

💫 Beyond certificates, companies may choose to engage with selected teams.

💫 Your solutions will be judged by the actual enterprise teams who own the problem statements. You will receive feedback from industry leaders based on the feasibility, innovation, and real-world impact of your prototype.

💫 Showcase your technical expertise in front of innovation leaders at one of India's largest digital policy and tech forums.

Post Message: I was telling the team yesterday that we need to come up with more innovative use cases in the App Studio. So today they sent me this new capability that they've built into App Studio. Now you can create gesture-controlled applications or gesture-controlled interfaces.

Imagine the capability that we could create this kind of innovative experience in under a day!

Now, we're creating a lot more advanced, nuanced capabilities where the screens will change on demand from the user.

Last year we were discussing these topics of Generative UI. I think that is now almost coming full circle, where UIs are really being generated on demand.

Working on another application on the platform where we can create real-time videos.

We are now starting work with world models where your interface or the experience can be immersive, because the world around you can be created on demand. These kinds of capabilities are just so amazing!

Anyways, that's been my Friday. What are you doing? Bye!

Archana . Amit Srivastava Adya

Post Message: 🚀 We're Hiring AI Builders at Adya 🚀

This is a big moment for us at Adya—we're expanding our core engineering team and looking to hire 4 exceptional AI developers over the next 30 days. If you're someone who doesn't just experiment with AI but builds real, production-grade AI products, this might be for you.

🔍 Who we're looking for

AI Developers with 2–4 years of hands-on experience who can demonstrate depth, not just tools.

✅ You should have experience in one or more of the following: ✅ Building AI platforms or end-to-end AI products ✅ Working in domains like Healthcare, BFSI, Govt, Energy, Retail, or Enterprise SaaS ✅ Fine-tuning models, building RAG pipelines, or working with large knowledge graphs ✅ Designing enterprise-grade, scalable, fungible architectures ✅ Strong full-stack capability (front-end + back-end + AI orchestration) ✅ Using modern AI platforms and frameworks to ship production-ready solutions

What matters most to us:

👉 Quality of thinking 👉 Architecture clarity 👉 Ability to take a problem from zero to production

🌱 Why Adya?

At Adya, you won't be working on toy demos. You'll be building: ✨ Multi-agent systems ✨ Enterprise AI platforms ✨ Real solutions deployed across industries ✨ Products used by enterprises, developers, and governments ✨ You'll work with a team that cares deeply about engineering rigor, system design, and long-term impact.

📩 How to apply

Post 128

Post Message: Well begun is half-done, they say.

And a great start was exactly what we were off to at KCDH, IIT, Bombay, with a meeting of brilliant minds to address one the most important issues in healthcare in India today- the stark underrepresentation of the Indian Genome in global research.

With a highly powered team from across the spectrum of interest groups represented by IGIB, Indian Institute of Technology, Bombay , Premas Life Sciences Pvt Ltd. Adya , HCG Hospitals and Colossa Ventures, the day saw a free flow of ideas, insights and perspectives foundational to our vision of an AI-ready Data commons for Genomic and other Omic patient data.

This is the beginning of a concerted effort to create a unique, national level framework and ecosystem that will fuel innovation, collaboration and monetization across Research, Industry, Healthcare and Investors, with the ultimate goal of precision medicine and improved outcomes for the Indian Patient.

I ended the day with unadulterated optimism for our field- feeling deeply energized by thought leaders and experts including Praveen K. Gupta, Debjani Saha, Shayak Mazumder, Chinmaya G. D. Suryavamse ,Ashish Mittal , Dr Richa Singh, Vandana Rajadhyaksha, Uday Chatterjee, and Shantanu Chowdhury at Koita Centre for Digital Health - KCDH (IIT Bombay), Ranjith Padinhateeri , Kshitij Jadhav , Nirmal Punjabi, Ph.D. Saket Choudhary

Thank you, Shantanu Chowdhury for the vision and Ranjith Padinhateeri for making it happen. Looking forward to making this a reality!

Post Message: Sometimes you walk into certain rooms and you can feel the vantage point.

This was one such room. An eclectic mix of thought leaders from IGIB Indian Institute of Technology, Bombay Accenture Premas Life Sciences Pvt Ltd. Colossa Ventures Adya

The topic: To create a data commons for Indian omics (genes, etc), collaborate on creating solutions based on the data that will go a long way towards creating new drugs, diagnostics, clinical solutions for Indian diaspora (in India and abroad).

The goal: ✨ To bring hospitals and organisations that hold Indian data, starting with cancer patients,

✨ Bring specialists who work on wet lab and genomics and multi-omics solutions to solution on this data

✨ Bring AI specialists onboard to create new BioFMs (bio foundational models) as well as Agentic solutions that will ensure these solutions are easily accessible to the end users

✨ Bring large multi faceted players to bring global capabilities as well as specialists and distribution capabilities

✨ Bring investors onboard who can help drive the capital raise for such a transformative project.

Auspicious beginnings for one of the most promising developments in India that will eventually help solve key pharma and healthcare challenges in India.

Some examples

1️⃣ Indian genetic study for cancer drugs has never been done till date. This results in drugs created for Western genes not working in India. Result? We end up using chemo to blast all cells - good and bad, without the ability to target.

2️⃣ Same applies for chronic diseases which also need targeted studies.

The good news? Indian govt gave a grant of Rs 50cr to collect the first 800

Post Message: Post 4: Adya's Core Insight - Build vs Buy Is a False Choice

Adya starts from a different belief: in the agentic AI era, enterprises don't want to either build or buy.

They want a system that lets them do both — on the same foundation.

So Adya is not: ❌ A vertical AI SaaS ❌ A pure build-it-yourself platform

Adya is a five-level system that combines: ✅ The fungibility of a platform ✅ The speed of ready solutions

This is where the real differentiation begins ✨

Post Message: Being part of the Adya AI Launchlab Buildathon both as a participant and as one of the main coordinators was an incredibly enriching and rewarding experience. From planning and coordination to execution, the entire journey offered valuable exposure to teamwork, leadership and real-time problem solving.

I’m deeply grateful to Adya for trusting us with this opportunity and for creating such an impactful platform for student innovation. A special thanks to Shayak Mazumder (CEO & CTO, Adya) for taking the time to mentor and guide us, sharing valuable insights into the future of the IT and agent-building industry.

Heartfelt thanks as well to Rubin Kumar K, AATHAVAN SERALATHAN and Sanjay Sir for their constant guidance and support throughout the event.

I was fortunate to be involved in the initial sessions conducted by Adya for our seniors, which marked my first exposure to AI agents and the Vanij platform. That introduction sparked a strong interest in agent building and shaped the journey that followed.

Grateful as well for the encouragement and backing from Dr.Sarika S, HoD of AI & DS, and for the seamless support from our staff coordinators Madhu Priya and MIDHUN M. 🌟

Most importantly, huge thanks to my teammates Roshan Robin and Anjana Ajith working in sync, coordinating every detail and supporting each other throughout made this experience truly special and memorable ❤️

Looking forward to leveraging the Vanij platform to build something meaningful and ensure that all these learnings translate into real-world impact.

Post Message: Acting as one of the coordinators of Adya ALL Buildathon along side Pavithra Deepu E and Anjana Ajith was an incredible experience. The team at Adya, Rubin Kumar K and AATHAVAN SERALATHAN and others, helped us prepare for the event by teaching us how to use the Vanij platform and also providing the necessary support to host such an event. I sincerely thank Shayak Mazumder, CEO and CTO of Adya.ai for taking time to teach and guide us, providing his insights on the future of the IT industry.

I had the fortune of being involved in the initial classes that Adya took for our seniors, thanks to the push given to me and Pavithra Deepu E by Rajaraman Viswanathan sir. Thanks to him, I was introduced to the agent building industry and had my first exposure to n8n.io and the rest was history.

In the coming weeks, I wish to use Vanij platform's many tools to build something unique, so as to not let all the events that happened which led me to this point, go to waste.

Post Message: Happy to be a part of Adya Launch Lab Buildathon at Adi Shankara Institute of Engineering and Technology. Organized by the Department of Artificial Intelligence & Data Science in collaboration with IEEE, IEDC, and TinkerHub, the buildathon focuses on practical AI innovation.

The program offers hands-on exposure to building real-world AI solutions with zero code, exploring AI agents and custom LLMs, and understanding cloud credits, startup launch support, and monetization strategies.

Appreciation to Adya for creating a strong platform for student innovators, and thanks to Shayak Mazumder for guiding and enabling the next generation of AI builders.

Looking forward to learning, building, and collaborating.

Post Message: The first article in a series of articles about AI by a journalist I particularly like, Ankush Das.

Ankush has been having a lot of conversations with me on various topics around AI. His attention to detail and his understanding of the nuances is something I love.

His questions typically tend to go very deep into forward-thinking areas, which is way beyond the hype cycle and beyond the noise that we typically tend to read when it comes to AI.

I particularly love the way he has framed this article because a lot of things that we see in India is build vs. buy hype.

Whereas, Ankush has focused more on the human element of AI and how it will actually impact developers and employees.

And I want to thank Ankush in particular for giving Adya a showcase.

Thank you, Inc42 Media Inc42 Media, for being such a great supporter and proponent of start-ups.

Link to the article in my first comment.

Post Message: Being part of this initiative was truly inspiring. The sessions offered valuable insights into AI Agents, innovation, entrepreneurship, and building in public, while clearly showing how students like us can transform ideas into real-world impact using Artificial Intelligence. What stood out the most was the hands-on learning environment and the strong spirit of collaboration. From brainstorming ideas and solving problems together to interacting with mentors, every moment reinforced how powerful AI can be when driven by curiosity and purpose. I'm incredibly grateful to Shayak Sir and the Adya team for creating such a meaningful platform where students can learn, experiment, and grow. Experiences like this encourage us to think beyond the classroom and step confidently into the future of technology. I'm excited to keep exploring, building, and sharing my journey ahead — because this is just the beginning! #Adya #AdyaLaunchLab #AIOnCampus #AIAgents #StudentInnovation #ArtificialIntelligence #BuildInPublic #FutureBuilders #TechInnovation

Post Message: Turning paperwork into AI workflows ⚡🧠

AI is often discussed in terms of models and capabilities, but its real value emerges when it is embedded into operational workflows. That perspective became much clearer through the Adya Launch Lab experience.

During the Adya buildathon, our team — Albert M Paul, ALWIN SONY, Abhinavkrishna B, and myself — developed TractoLens, an AI-driven tractor invoice processing system designed for loan underwriting workflows. The objective was to handle a problem that appears straightforward but is operationally complex due to handwritten invoices, inconsistent formats, and manual verification steps.

Built using Adya Flow Builder and multimodal LLMs, TractoLens: • extracts structured data from handwritten and printed invoices • produces strict, schema-controlled JSON outputs (model, HP, price) • validates entries against a master reference dataset • flags inconsistencies for human review rather than silently passing errors

The system was designed with a workflow-first mindset — ingestion -> intelligence -> validation -> action — focusing on reliability, auditability, and reduced manual effort in underwriting processes.

Appreciate the insights from Shayak Mazumder sir on designing AI systems that address real business constraints, and the Adya team for fostering a build environment centered on practical problem-solving.

Post Message: From curiosity to clarity and a whole lot of building between🚀

Had an incredible time at Adya Launch Lab on Campus, where we didn't just learn about agentic AI, but actually rolled up our sleeves and built with it.⚙️🔥

During the buildathon, we started developing LawZen a contract loophole finder aimed at analyzing legal documents to surface hidden risks and overlooked clauses. It's still very much a work in progress, but the experience gave us hands-on exposure to the real challenges of building agent-driven applications beyond polished demos.⚖️🧠

Built alongside Sufiyan Shiraj Mohammed, Tejas KM and Sreenanda K Sahajan made the journey even better. Huge thanks to Shayak Mazumder Sir, the Adya team, Rubin Kumar K and Sanjay S (devs at Adya) for their guidance during the buildathon, and to ASIET for creating a space that truly encouraged experimentation, iteration, and learning by doing.

Excited to keep building, refining, and pushing ideas forward

Post Message: ✨ Building My First AI Agent of 2026 ✨

I kicked off 2026 by attending the Adya Launch Lab Buildathon on 5 January, and walked away with something far more valuable than just notes or takeaways: a working AI prototype.

At this one-day workshop, conducted in collaboration with Adya AI, the Department of AI & DS (ASIET), IEEE, IEDC, and TinkerHub, I built a Career Path Discovery AI agent using the Adya AI platform. The agent interacts with users to understand their interests, skills, personality traits, and work preferences, and then generates: • a personalized profile summary • six relevant career options with match percentages • insights like salary range, demand, remote feasibility, and satisfaction • and a detailed action plan for careers they want to explore further

What made this experience stand out was not just building, but the perspective shared by Shayak Sir. One idea that really stayed with me was his emphasis on how AI, while it may not “feel,” can reflect empathy consistently - without fatigue, bias, or judgment. In many cases, it already outperforms humans in accuracy, especially in critical fields like healthcare.

Another powerful takeaway was about mindset. Despite having immense talent, we often hesitate to build. We look for roles instead of creating solutions. This session existed for one reason: to change that.

I walked away with clarity, confidence, and a functioning product. AI alone can do around 55% of the work. Humans alone bring about 45%. But when humans and AI work together, that potential rises to 65% and beyond. Learning how to work with AI is what will truly shape the future.

Here’s the prototype I built - feel free to try it and let me know how close it hits to your own interests and career direction: https://lnkd.in/gxVZQzhn

Grateful to Shayak Mazumder and the Adya team for pushing students to build, not just learn.

Post Message: Had a great experience attending the Adya Launch Lab, which focused on AI on campus, AI agents, and how students can turn ideas into real-world solutions. The session bridged the gap between theory and practice, highlighting how AI can be built, tested, and showcased openly while encouraging a strong build-in-public culture among students. Grateful to Shayak Mazumder Sir and the Adya team for organizing such an insightful initiative and providing a platform that truly supports student-driven innovation. Looking forward to applying these learnings and exploring more in the AI ecosystem.

Post Message: Had a great experience participating in the Buildathon session organized under Adya Launch Lab at our campus. The session was a solid exposure to building ideas from scratch,

understanding how AI-driven thinking, problem-solving, and rapid prototyping work in real scenarios. Even with limited time, the environment encouraged experimenting, learning fast, and building in public — which is exactly what today's tech culture demands. A big thanks to Shayak Sir and the Adya team for creating such an engaging and insightful session and for motivating students to explore AI, innovation, and hands-on development early in our journey. Looking forward to building more, learning more, and growing as a future tech builder 🚀 Grateful to be part of this initiative! 🌟 I'm excited to keep exploring, building, and sharing my journey ahead — because this is just the beginning! #Adya #AdyaLaunchLab #AIOnCampus #AIAgents #StudentInnovation #ArtificialIntelligence #BuildInPublic #FutureBuilders #TechInnovation

Post Message: From buzzwords to workflows

For a long time, AI felt like just another buzzword to me — talked about everywhere, but not something I truly understood or knew how to apply. The morning session at Adya Launch Lab changed that, breaking down what Adya (India’s largest AI startup) is building, and explaining Agentic AI, workflows, and tools in a way that finally gave AI real meaning and context.

The evening moved into a hands-on Buildathon, where we applied these ideas using Adya's agentic AI workflows and SAI for the front-end. Along with Tejas KM, Sreenanda K Sahajan, and Rosphil Maria, we worked on LawZen — a work-in-progress contract loophole finder designed to analyze legal documents and surface potential risks and overlooked clauses.

Huge thanks to Shayak Mazumder Sir, the Adya team, Rubin Kumar K and Sanjay S (devs at Adya) for their guidance during the buildathon, and to ASIET for organizing and supporting such a valuable learning experience.

Post Message: Buildathon experience:

Adya Launch Lab Buildathon 2026 | Hands-on AI Building

Attended the Adya Launch Lab Buildathon, organized by the Department of AI & Data Science, Adi Shankara Institute of Engineering & Technology.

Shoutout to Adya & Shayak Mazumder for the opportunity! ✨

Use Case: Autonomous Forecasting & Budgeting Agent (IT + Finance) ; an AI-driven multi-agent system designed to forecast IT and operational budgets, detect deviations, and deliver insights for financial decision-making.

We explored ML-based forecasting, multi-agent orchestration, and explainable reporting using Adya's Agent Studio and Application Studio, and successfully utilized GCP cloud credits provided during the buildathon. Built alongside Festin Biju, Fiza Fathima Puliyappilly Sudheer and Arjun A.

A great experience blending industry, finance, and agentic AI

Post Message: From curiosity to clarity.

Attended Adya Launch Lab AI on Campus, where we moved from understanding agentic AI concepts to actually applying them. 💡

During the buildathon, we started working on LawZen, a contract loophole finder aimed at analyzing legal documents and surfacing potential risks and overlooked clauses. It's still very much a work in progress, but the process helped us understand the practical challenges involved in building agent-driven applications beyond just demos.

Built alongside Sufiyan Shiraj Mohammed, Rosphil Maria, and Sreenanda K Sahajan

Thanks to Shayak Mazumder, the Adya team for keeping the experience focused on building and experimentation.🚀

Post Message: Today, I had the opportunity to participate in a Buildathon conducted at our college by Adya. The session began with an introduction to adya.ai, an intuitive AI-powered tool that enables rapid project building with structured workflows and architecture design. As part of the buildathon, I designed a Travel Guide / AI Travel Agent application focused on solving a real-world problem faced by travelers. Problem & Solution: Travelers often find it difficult to plan trips that match their preferences and budget due to lack of personalization and clear cost details in existing platforms. To address this, I designed an AI-based travel guide that generates personalized itineraries, suggests accommodations and activities, and provides transparent cost breakdowns, making trip planning simpler and more efficient. This buildathon was a great hands-on experience that helped me understand AI-assisted product building, user-centric design, and structured system workflows using adya.ai. Grateful to Adya, Shayak Mazumder and the department of AI and DS of Adi Shankara Institute of Engineering and Technology ,Kalady for organizing this insightful event👏 Looking forward to building more impactful projects!

Post Message: ✨Insights from Adya Launch Lab: The Future of AI and Student Innovation*

I recently had the opportunity to attend the Adya Launch Lab event, which provided a deep dive into the evolving landscape of Artificial Intelligence and its practical applications. The sessions were incredibly insightful, covering several key themes that are shaping the industry today:

■ AI Agents & Campus Innovation: Exploring how autonomous AI agents are moving from theory to real-world campus environments. ■ The "Build in Public" Mindset: Understanding the Value of Transparency and Community Feedback in Developing New Technologies. ■ Student-Led Problem Solving: How students can leverage AI to build impactful solutions rather than just observing the trend.

The event was a strong reminder that the barriers to entry in tech are lower than ever, provided you have the right mindset and a willingness to experiment. It has motivated me to move beyond theory and begin applying these AI concepts to tangible projects. A sincere thank you to Shayak Sir and the Adya team for organizing such an impactful session and for their support of student-driven innovation. I am looking forward to applying these learnings as I continue to explore the field of AI and technology. #Adya #AdyaLaunchLab #AIOnCampus #AIAgents #StudentInnovation #ArtificialIntelligence #BuildInPublic #FutureBuilders #TechInnovation Shayak Mazumder Adya

Post URL:
https://www.linkedin.com/feed/update/urn:li:activity:7413866953519407104/?actorCompanyId=91107261

Post Message: The results are out and Adya has scored #32 global rank in Agentic AI on T Bench. Only Indian company in the list.

Every other company in the list is funded to the tune of $30M or above. Most are backed by top US universities.

When we filed our scores on T bench, we were ranking #4 global in October.

Unfortunately, T Bench was undertaking some changes to their software and didn't publish the results till Jan 26.

Multiple better models were released in the interim. Better models with more test time compute typically results in better multi-agentic scores.

Hence, in the final results, we got ranked #32 global.

We are not giving up on this.

We have recently filed on SWE Bench. We are ranking #14.

We will keep pushing the envelope on benchmarks, new papers and patents in 2026.

Post Message: 🚀 THE LAUNCH IS HERE. After months of late nights, bug squashing, caffeine overdoses, and more feature debates than we care to admit... we're finally live.

🧠 Introducing Vanij by Adya AI — a full-stack AI creation ecosystem built for the future. We've rolled up five power-packed studios into one unified platform, giving devs, creators, and enterprises the tools to build, deploy, and scale AI without limits. Here's what we're launching with:

🤖 Agent Studio Design autonomous AI agents with 130+ plug-and-play components and powerful MCP connectors (Slack, Jira, Notion, HubSpot, you name it). Build, deploy, and watch your agents go to work.

💻 App Studio Turn any agent into a front-end app with one click. Use our no-code UI builder or dive deep into custom Next.js/React code. Launch internal tools or public products in minutes.

☁️ Cloud Studio Infra, handled. Provision VMs and clusters across AWS, Azure, GCP—with full GPU config, monitoring, and alerting. BYOC (Bring Your Own Cloud 😉) ? We support that too.

🎯 Model Studio Train and fine-tune open-source LLMs with your own datasets. Track progress, evaluate performance, and deploy models at scale, zero DevOps pain.

🛒 AI Marketplace Agents, apps, and models, all in one place. Monetize your creations or find ready-to-go solutions from the community.

👥 And yes, there's an Admin Control Center: Manage users, billing, keys, audit trails, file uploads, and support from a single dashboard. This is just the beginning.

Post Message: This is India’s AI Moment.

India’s AI revolution begins November 1st. The question is no longer if, but it’s whether you’ll be part of it.

For the first time, India’s builders, dreamers, and doers are coming together to rewrite how the world sees innovation.

💥 Adya LaunchLab 2025, in partnership with Startup India, is a movement. A nationwide ignition of the next 40,000 Indian developers, founders, and startup teams who will define the global AI decade.

Across 12 cities and an all-India virtual track, builders will get exclusive access to Adya’s AI platform, worth $5,000, completely free.

You’ll build real products. You’ll pitch to real VCs. You’ll get in the room with mentors, investors, hyperscalers, and ecosystem leaders who are already shaping India’s AI frontier.

All you need is a vision. We’ll give you everything else: the platform, the power, the partners.

🇮🇳 For decades, India powered the world’s technology. Now it’s time to own the innovation.

⚡ The first cohort launches November 1st. You’ll either be the one who built India’s AI future, or the one who watched it happen.

🔗 Interested? You can register here! -> https://lnkd.in/e5zntXEh. Also check out website adya.ai/launchlab for more info!

Post Message: Super agents assemble!

Adya.ai, an IAN Group portfolio company, is redefining how businesses operate with “Super Agents”—intelligent AI employees that collaborate, make decisions, and execute end-to-end business functions autonomously.

Built in collaboration with Google for India’s Digital Public Infrastructure (DPI) stack, Adya’s Super Agent is a game changer, orchestrating specialised agents for sales, marketing, coding, and research, all through a single chat interface. This deeptech startup wants its super agents to act as a human-like team, but faster, scalable, and memory-efficient. This platform is open to developers, students, and more than two lakh small and medium businesses, making "AI building AI" a reality.

IAN Group continues to bet on transformative tech, empowering founders who are reimagining the future of work.

Post Message: Ever got that daunting feeling when looking at Agent Workflow builders?

Felt that traditional workflow builders just don't scale for real enterprise solutions?

Application builders and vibe coding platforms look flashy at first... until you realize they're just MVP pumps that can't handle serious backend and frontend integrations.

Can't deploy locally? Think you're locked into someone else's infrastructure? Or tired of jumping between multiple apps just to stitch together a single workflow?

Yeah, we've been there.

That's exactly why we built Vanij, Adya's full-stack agentic AI platform built for enterprise-grade scalability, speed, and control. ⚡ Here's what our clients across the U.S. are already seeing: ✅ 15% higher lead conversions through automated AI-driven outreach ✅ 72% reduction in time spent on cold campaigns, fully handled by AI Agents ✅ 20% lower operational costs ✅ 45% higher overall efficiency Vanij enables full-stack enterprise-grade solutions with all the bells and whistles that make us state of the art. You can build, customize, and deploy anywhere — your own servers, private cloud, or any provider you choose. ☁️

Stop wrestling with patchwork tools.

Stop being locked in. Start building intelligent, scalable systems that actually work.

Post Message: Post 1: August 2024 — When Building Our Own LLM Made Sense

In August 2024, at Adya, we built our first fine-tuned large language model. At that time, it felt like the obvious thing to do.

GPT-4o was the benchmark. Open-source models were just arriving. Fine-tuning looked like the future.

By September, our model was showing ~21% better efficiency than leading models for retail tasks, and used ~85% fewer tokens.

On paper, it looked like a moat.

But that moment didn’t last.

Because what we learned over the next few months changed how we think about AI forever.

This is the story of why we stopped chasing "the best model" — and started building a platform instead.

👇 More in the next post.

Post URL:
https://www.linkedin.com/posts/smhaaz_creating-such-an-interesting-website-used-activity-7406983240751898624-FA-S/

Post Message: Creating such an interesting website used to take months. Today it takes minutes. That is not what sets Adya apart. 3 things to understand!

🟢 A structured approach. Don't lend your thinking to the AI. Create the requirements doc, the system architecture, the designs, the project plan, the testing plan and scripts, frontend and backend code as well as databases.

🟢 End to end. Create your own agents using 100+ LLMs, components, 200+ MCPs, and 100s of libraries as well as ready solutions. Then connect these agents to the apps you create on Adya. Create your own cloud accounts and host on your own cloud. Connect your own LLMs and tools.

🟢 The devil lies in the details. Use Adya's AI ETL to connect all your different databases, set permissions, access rules etc. Use the Adaptive Governance Protocols to convert your SOPs and SLAs into canonical rules to ensure that your Agents cannot make mistakes. Use the CPAAS to create voice agents, WhatsApp Agents and social media Agents and let your Agents connect with users on all channels. Use Model Studio to create or finetune your own LLMs.

🟢 Distribute at scale. The GTM agent will do sales, marketing, research, calling, customer support etc for you. The marketplace will let you monetise. Partners will help you monetise.

The important question is not how you built it, but how scalable and production ready is it?

Post Message: I recently attended an informative session on the Adya AI platform, and it was a truly valuable learning experience.

The session provided a clear overview of how Adya AI works and how artificial intelligence can be effectively used to analyze data, build intelligent solutions, and automate workflows. What stood out most was how the platform makes AI accessible through intuitive tools, enabling both technical and non-technical users to work with AI-driven solutions.

Key takeaways from the session included:

•Understanding the core architecture and features of Adya AI •How data is processed and transformed into actionable insights •Real-world use cases demonstrating practical AI applications

•Low-code/no-code capabilities for faster development and deployment •Practical approaches to integrating AI into existing projects and workflows

I plan to use Adya AI for data analysis and informed decision-making, automate repetitive tasks to improve efficiency, and explore AI-driven solutions for academic and project-based work. The session gave me a clearer understanding of how applied machine learning can be used to solve real-world problems.

Grateful to the organizers and speakers for delivering such an engaging and insightful session.

Post Message: As a member of the RIT Roorkee x Adya AI Student Organising Team, I'm so excited for the Adya Launch Lab hitting our campus tomorrow! This is a must-attend for every student who dreams of becoming a founder. Don’t just develop—LAUNCH your business idea. See you there!

The Adya Launch Lab hits the Roorkee Institute of Technology campus tomorrow, December 4th, and this is not a drill it's a launchpad.

This is your fast track from developer to founder. Over the course of the two days, young builders will:

*BUILD products live on the Adya platform. *LAUNCH their solutions directly onto the Adya Marketplace. *CONNECT instantly with our exclusive ecosystem of VCs, mentors, and partners.

This is the moment your idea stops being code and starts becoming a business. Roorkee, your entrepreneurial future ignites tomorrow.

Don't miss the final chance to claim your spot. Register NOW! Register now:
https://lnkd.in/gF4gSRxc

See you on campus tomorrow, December 4th!

Post URL:
https://www.linkedin.com/posts/smhaaz_adya-is-excited-to-announce-that-roorkee-activity-7367035791107166208-S6Vm/

Post Message: Adya is excited to announce that Roorkee Institute of Technology is becoming the first Agentic AI Campus of Uttarakhand! This is an amazing collaboration.

2500 engineers will be getting the opportunity to create 1000s of workflows, AI apps and agents and create real industry use cases on our platform entirely for free!

Roorkee Institute of Technology is also creating an industry centre of excellence where they will invite thousands of local industry partners to share their requirements which will then be created by the engineers using Adya's platform.

This is a watershed moment. We will no longer complain that Indian engineering grads are not industry ready.

Instead we will give them the tools and the exposure as well as opportunities to prepare and build real solutions.

My bet is that a large number of these engineers will end up creating very useful and maybe even globally leading products.

Time to invest in the future.

Name: SRI HARI

Post URL:
https://www.linkedin.com/posts/sri-hari-3a070b291_hi-everyone-today-i-had-the-opportunity-activity-7406612946660818945-e3TL/

Post Message: Hi everyone, Today I had the opportunity to explore the Adya AI program(Adya) and it genuinely changed how I think about building applications with AI.

Adya AI is not just another AI tool or framework. It is a full-stack AI orchestration platform that enables developers and teams to design, build, and deploy AI agents and applications much faster than traditional approaches. By combining domain-specific intelligence with strong integrations across cloud infrastructure, data systems, and large language models, it significantly reduces development time and complexity.

Through the program, I learned how components like the Vanij platform, Adya Deep Intelligence (ADI), and the agent orchestration layer work together to support production-ready AI workflows. These tools are designed to optimize cost and latency while maintaining enterprise-level security and scalability.

Overall, the experience provided valuable insights into how modern AI systems can be built efficiently and responsibly for real-world use.

Post 212

Name: Shayak Mazumder

Post URL:
https://www.linkedin.com/posts/smhaaz_so-the-adya-ai-team-was-building-a-video-activity-7264998557726769152-LlHP/

Post Message: So, the Adya AI team was building a video understanding agent from last week. Imagine that you could plug a video agent in your app/website which can understand any video and start giving your customers answers to any questions they have.

Some use cases of video understanding agents would be:

✨ You record a video for your customers. They can start asking questions to the video and it will give them voice, text, image answers based on what you recorded in your video.

✨ A student records a video of a class. They go back to it after many years or before the exam and start asking the agent questions. It guides them effectively, helping them find the answers etc.

✨ A young batsman records a video of his game and goes to the agent to ask questions about how he can improve his batting. The agent, like a coach, gives him clear instructions on how to improve.

✨ A law student passes recordings of court sessions and starts having a detailed discussion on case law with a legal agent connected to the video agent.

I can keep going on. But, you get the idea. Essentially, we are converting information in videos into intelligence and then actions. What a world!

Later this week I will share a video where people will be able to create their own UI by simply stating what they want, and the AI will create the UI or application logic.

If you connect the UI to the agent, you have something that you can publish for your customers to use. So, all you will need to do is say what you want and upload the video!! The rest will be done automatically.

How did we create this agent? We took a random video from Youtube, fed it into a video LLM using the agent. We ran the LLM locally and stored the text and video in a database. We then ran RAG (Retrieval Augmented Generation) on this database. Now when we ask it any question about the video, it takes us to a screenshot from that exact moment and starts to give us insights, answers, etc.

Do you have an idea about what you want to build using AI? Come speak with

Post 214

Name: Shayak Mazumder

Post URL:
https://www.linkedin.com/posts/smhaaz_post-3-why-we-decided-to-build-the-adya-activity-7412696728119795713-jw14/

Post Message: Post 3: Why We Decided to Build the Adya platform

At some point, we stopped trying to fix what existed. And decided to build what was missing. Vanij was born from that decision.

We asked: what would a platform look like if it were designed from day one for AI-native systems, not just AI-assisted apps?

That's where our core choices came from: ✨ Agent Studio — so anyone can build real agentic workflows, no-code, by connecting hundreds of LLMs, tools (via MCPs), databases, and AI libraries. ✨ Multi-Agentic Network (MAN) — because centralized orchestration kept breaking when we scaled. We needed agents that could coordinate and run in parallel. ✨ AI-ETL — because without unifying enterprise data, agents are blind. Model Studio — because enterprises must own and fine-tune their models, not just call APIs. ✨ Structured App Studio — because zero-shot code generation was too fragile for real systems. ✨ Cloud Studio - because enterprises want to host on their own cloud tenants and want the flexibility to shift as needed between cloud providers.

Every one of these came from pain we personally felt while building.

Today, when people ask me how Adya compares to vibe coding tools, I say this: ✅ Vibe coding helps you build apps faster. Adya helps you build systems where AI actually runs the business.

For us, this wasn't a product decision. It was a survival decision.

And it's why we believe Adya represents the next stage in the evolution (maybe a revolution) — from tools that write code, to platforms that run intelligence.
