Shayak Mazumder

CEO/CTO & Co-Founder

Shayak Mazumder is an AI pioneer whose work bridges cutting-edge research, academic leadership, and enterprise-scale innovation. As the CEO and CTO of Adya AI, he leads the development of what many regard as the world's most advanced agentic-AI platform—enabling autonomous, multi-agent intelligence for Fortune-500s, governments, and high-growth startups. His platform innovations span generative multi-agent systems, reinforcement learning for autonomous decision-making, and applied AI governance frameworks, setting new benchmarks in how AI systems operate safely and at scale.

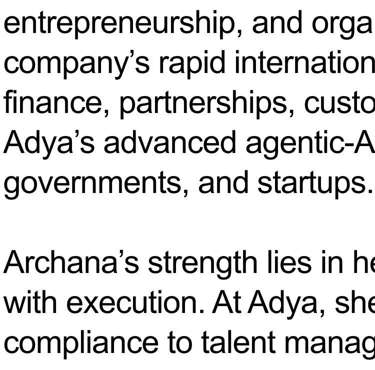
An active contributor to the global AI community, Shayak regularly contributes to whitepapers on multi-agent coordination, human-AI collaboration, and emergent intelligence, which is work that informs both industry best practices and academic discourse. He collaborates on cutting-edge AI research projects exploring areas such as explainable AI, adaptive learning models, and scalable architectures for enterprise AI deployment. His publications and invited talks position him as a thought leader at the intersection of applied AI research and real-world implementation.

Additionally, Shayak serves on the Board of Studies in Artificial Intelligence & Machine Learning at Sri Eshwar College of Engineering, teaches as Visiting Faculty in AI/ML at Mumbai Educational Trust (MET League of Colleges), and has delivered guest lectures on Artificial Intelligence at INSEAD. He has held professorial appointments in AI studies, sits on multiple academic and industry boards for Applied AI & helps design curricula that integrate advanced machine learning, neural architectures, and AI ethics.

Before building Adya AI, Shayak drove international commerce for a multinational conglomerate across 21 countries in LATAM, Africa, South Asia, and China, scaling operations beyond US $1 billion annually. He previously co-founded and exited ventures in e-commerce enablement, hospitality, and media production, bringing a multidimensional perspective to how AI can transform diverse industries.

Shayak's foundation in leadership was forged during a decade in the Indian Navy, where he retired as a Lieutenant Commander specializing in Nuclear-Biological-Chemical Warfare and aviation operations on blue-water deployments. An INSEAD MBA, he now combines military precision, business acumen, and deep technical expertise to advance AI innovation.

A frequent keynote speaker on AI, leadership, and digital transformation, Shayak is also an accomplished editor and writer, having led national newspapers and technology magazines. His ability to translate complex AI concepts like emergent intelligence, large language model orchestration, and AI safety into actionable insights makes him one of the most trusted voices in the global AI landscape.



Archana Shah

COO & Co-Founder

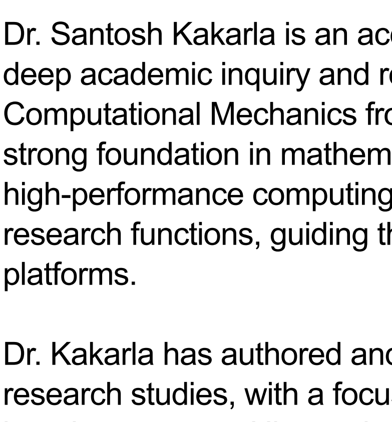
Archana Shah is a dynamic leader at the intersection of operational excellence, global entrepreneurship, and organizational strategy. As the COO and Co-Founder of Adya AI, she drives the company's rapid international scale-up, anchoring strategy execution, operational efficiency, finance, partnerships, customer success, and people operations. Her role is central to transforming Adya's advanced agentic-AI platform into a global enterprise solution serving Fortune 500s, governments, and startups.

Archana's strength lies in her ability to build scalable operational frameworks that balance innovation with execution. At Adya, she oversees end-to-end business operations, from financial planning and compliance to talent management and organizational culture. She has built systems for cross-border team collaboration, client delivery excellence, and partner ecosystem development, ensuring the company's ambitious growth goals are met without compromising on operational rigor.

Before Adya AI, Archana was the Co-Founder of Eunimart, a cross-border e-commerce platform that expanded across multiple continents and was backed by leading global accelerators including Techstars and Alchemist. There, she played a pivotal role in shaping go-to-market operations, scaling logistics and customer service infrastructures, and developing governance processes for a distributed international business.

Earlier in her career, Archana founded and led a successful advertising agency, where she managed creative production, client servicing, and large-scale campaign delivery, producing over 200 commercials. She also managed a portfolio of hospitality properties in Goa, recognized among the top 10 on TripAdvisor, where she honed her ability to manage multi-site operations, customer experience, and staff administration. These diverse experiences have given her a 360-degree perspective on operations, brand building, and organizational management across industries.

Archana complements her entrepreneurial journey with strong academic foundations. She is a graduate of the Women Entrepreneurship and Finance for Growth programs at IIM Bangalore and is a member of the MIT Global SCALE Network, where she engaged with global best practices in supply chain management, operational design, and strategic scaling. Known for her hands-on leadership and execution-first mindset, Archana is a sought-after voice on operations management, business scaling, and women in leadership. Her ability to combine strategic foresight with operational discipline makes her a rare leader who can guide organizations through both rapid growth and long-term sustainability.



Dr. Santosh Kakarla

Head of Data Science and Research

Dr. Santosh Kakarla is an accomplished AI researcher, scientist, and practitioner whose career bridges deep academic inquiry and real-world deployment of artificial intelligence systems. Holding a PhD in Computational Mechanics from Université Paris-Saclay, he brings rigorous research methodology, a strong foundation in mathematical modeling, and deep technical expertise in large language models, high-performance computing, and intelligent agent systems. At Adya AI, he leads the data science and research functions, guiding the organization's contributions to the next generation of agentic AI platforms.

Dr. Kakarla has authored and co-authored numerous whitepapers, peer-reviewed journal articles, and research studies, with a focus on multi-agent architectures, reinforcement learning, and scalable deep learning systems. His academic work has been cited across multiple disciplines, from computational sciences to applied machine learning, underscoring his ability to push the boundaries of AI theory while ensuring real-world relevance. In addition to research papers, he actively contributes to AI conferences and workshops, where he shares insights on trustworthy AI, emergent agent behavior, and enterprise-scale AI adoption.

With extensive experience across academia and industry, Dr. Kakarla has designed and deployed production-ready AI systems that combine model reliability, protocol-driven architectures, and intelligent agent coordination to solve complex business problems. His applied research includes work on generative AI, natural language processing, computer vision, and domain-specific AI frameworks tailored to industries such as electric mobility, e-commerce, and enterprise automation.

At Adya AI, he plays a pivotal role in shaping the company's long-term AI research agenda, ensuring that advances in multi-agent intelligence, generative AI workflows, and explainable AI translate into reliable and scalable enterprise solutions. His dual expertise in fundamental research and applied systems engineering allows him to build bridges between scientific exploration and commercial deployment, making him a central force in the company's innovation roadmap.

Beyond his role at Adya, Dr. Kakarla contributes to the global AI research community through collaborations with academic institutions, peer reviewing for journals, and mentoring early-stage researchers. His passion lies in advancing the scientific frontiers of AI while maintaining a focus on ethics, transparency, and operational reliability. A respected voice in both research and practice, Dr. Kakarla exemplifies the rare ability to advance AI as a science while operationalizing it as a transformative technology for industry and society.

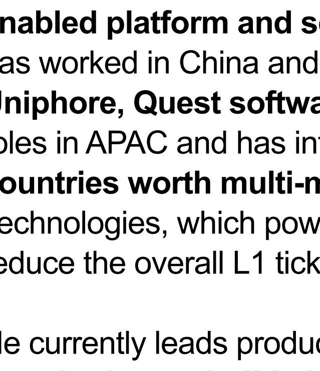
Amit Srivastava

Vice President Partnerships

Amit Srivastava is a dynamic marketing and growth leader with over two decades of experience across e-commerce, Consulting, ONDC, SaaS, and financial services. An MBA from the University of Rochester, a Top 25 U.S. B-School, Amit has driven business transformation through strategic marketing, digital growth, and cross-functional leadership.

Currently VP–Partnerships and Business Development at Adya AI, he spearheads GTM strategy, brand building, and enterprise alliances across industries including Healthcare, BFSI, Professional Services, Energy and many more. He has previously led marketing and growth at Clensta, BillionApps, and Deloitte, delivering measurable outcomes like 6x revenue growth, 3x lead conversions, and CAC reductions of over 130%.

Amit also brings hands-on entrepreneurial experience, having built and scaled a direct-to-consumer e-commerce venture, giving him a deep understanding of building brands, products, and customer journeys from the ground up. His strength lies in blending data-driven insights with execution excellence to scale new channels, products, and markets.



Mahesh Siddamsetty

Head of Product

Mahesh Siddamsetty is a product management leader focused on building next-generation **AI enabled platform and scalable product ecosystems**. He brings around 14+yrs of experience and has worked in China and Singapore for 10 years in enterprise software and SaaS companies such as **Uniphore, Quest software, BinaryTree, Juriba in GTM roles**. He has served in regional leadership roles in APAC and has introduced products to new markets and **conducted business in 20+ countries worth multi-million dollars**. He has been a Cofounder and Head of Product at Bumblebot Technologies, which powered workplace devices with virtual IT assistants enabling organizations reduce the overall L1 tickets by 25% resulting to cost reduction and improved productivity.

He currently leads product strategy for Adya, an Agentic AI operating system that enables organizations to **build, deploy, and govern AI agents, applications, and models at scale**.

Mahesh's work sits at the intersection of **product strategy, go-to-market strategy, and enterprise transformation**. He has led the development of multiple **purpose-built AI agents** spanning go-to-market automation, recruitment, customer engagement, healthcare workflows,— enabling organizations to deploy intelligent automation rapidly without rebuilding systems from scratch.

A key focus of his leadership is **platform and marketplace growth**. His approach combines product thinking with commercial execution — ensuring that platforms not only scale technically but also achieve meaningful adoption.

Mahesh has also engaged closely with industry analysts and ecosystem partners to position emerging AI platforms in the enterprise technology landscape, contributing to recognition in analyst evaluations such as the **ISG Provider Lens**

Mahesh is **passionate and obsessed about creating better customer experiences** leading to frictionless product journey and improved adoption.

He is particularly interested in advancing **agentic operating systems, and large-scale AI marketplaces** that redefine how software is built and delivered
